  TITLE     Direct Submission
  JOURNAL   Submitted (02-FEB-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On Feb 5, 2001 this sequence version replaced gi:12584335.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence has been finished according to sequence map criteria
            as follows.  An attempt is made to resolve all sequencing problems,
            such as compressions and repeats, but not necessarily within known
            annotated repeat sequence elements.  Where the sequence is
            ambiguous, there is an annotation using the 'unsure' feature key.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr9
            RP11-172F4 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-172F4 It may be shorter because we sequence overlapping
```

```
          sections only once, except for a 100 base overlap.
          The true left end of clone RP11-172F4 is at 1 in this sequence. The
          true left end of clone RP11-240L7 is at 139019 in this sequence.
          The true right end of clone RP11-392G7 is at 43511 in this
          sequence.

  JOURNAL   Submitted (24-JUL-1998) The Institute for Genomic Research, 9712
            Medical Center Dr., Rockville, MD 20850, USA
COMMENT     On Jul 24, 1998 this sequence version replaced gi:3241936.
            Address all correspondence to: Mark Adams The Institute for Genomic
            Research 9712 Medical Center Dr, Rockville, MD 20850, USA e-mail
            address: humgen@tigr.org.   The orientation of the sequence is from
            SP6 end to T7 end. Genes were identified by a combination of five
            methods including: XGRAIL (available by anonymous ftp from
            arthur.epm.ornl.gov), Genefinder (Phil Green, University of
            Washington), Genscan  (Chris Burge,
            http://gnomic.stanford.edu/~chris/GENSCANW.html)searches of the
            complete sequence against a peptide database,and the Human gene
            Index database at TIGR (http://www.tigr.org/tdb/hgi/hgi.html).
            Genes without pepetide homolgy having spliced EST hits are termed
            'Unknown gene product'. Genes encoding tRNAs are predicted by
            tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/).

            -------
            Project Information
            Center Project Name: 451340
            Center clone name: RPCI-11_117B23
            -------
            Summary Statistics
            Consensus quality: 148939 bases at least Q40
            Consensus quality: 156608 bases at least Q30
            Consensus quality: 158826 bases at least Q20
            Estimated insert size: 175000; agarose-fp estimation
            Estimated insert size: 160452; sum-of-contigs estimation
            Quality coverage:  7.26 in Q20 bases; agarose-fp estimation
            Quality coverage:  7.92 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3008: contig of 3008 bp in length
            *     3009     3108: gap of unknown length
            *     3109     9209: contig of 6101 bp in length
            *     9210     9309: gap of unknown length
            *     9310    15613: contig of 6304 bp in length
            *    15614    15713: gap of unknown length
            *    15714    23243: contig of 7530 bp in length
            *    23244    23343: gap of unknown length
            *    23344    39674: contig of 16331 bp in length
            *    39675    39774: gap of unknown length
            *    39775    60001: contig of 20227 bp in length
            *    60002    60101: gap of unknown length
            *    60102    85303: contig of 25202 bp in length
            *    85304    85403: gap of unknown length
            *    85404   117460: contig of 32057 bp in length
            *   117461   117560: gap of unknown length
            *   117561   161252: contig of 43692 bp in length.

COMMENT     On Feb 17, 2002 this sequence version replaced gi:18158390.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: sapiens@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0374M07
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            The sequence of this clone was established as part of a mapping and
            sequencing collaboration between the NHGRI Chromosome 7 Mapping
            Project (Eric D. Green, Director), John D. McPherson in the
            Department of Genetics (Washington University), and the Washington
            University Genome Sequencing Center. For additional information
            about the map position of this sequence, see
            http://www.nhgri.nih.gov/DIR/GTB/CHR7 , send
            mailto:egreen@nhgri.nih.gov , or see http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6.

            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome X, constructed by the Sanger Centre Chromosome X Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/ChrX
            WI2-86554F10 is from a Whitehead human fosmid library VECTOR:
            pEpiFos-5_Eco72I.

            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Jun 13, 2002 this sequence version replaced gi:21392442.
            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: ZUAK
                Center clone name: RP43-10G9
            -------------- Summary Statistics
                Sequencing vector: Plasmid; M77789
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 241130 bases at least Q40
                Consensus quality: 243666 bases at least Q30
                Consensus quality: 245673 bases at least Q20
                Estimated insert size: 259407; sum-of-contigs estimation
                Quality coverage: 0x in Q20 bases; agarose-fp estimation
                Quality coverage: 7.4x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)
            * NOTE: This sequence may represent more than one clone.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 14 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    55034: contig of 55034 bp in length
            *    55035    55134: gap of unknown length
            *    55135    92628: contig of 37494 bp in length
            *    92629    92728: gap of unknown length
            *    92729   119376: contig of 26648 bp in length
            *   119377   119476: gap of unknown length
            *   119477   142089: contig of 22613 bp in length
            *   142090   142189: gap of unknown length
            *   142190   165691: contig of 23502 bp in length
            *   165692   165791: gap of unknown length

            Grovemont Circle, Gaithersburg, MD 20877, USA
COMMENT     On Jul 25, 2003 this sequence version replaced gi:24414279.
            ---------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            ---------- Project Information
                 Center project name: cmz
                 Center clone name: 165N09

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            ---------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 167110 bases at least Q40
                 Consensus quality: 168559 bases at least Q30
                 Consensus quality: 169363 bases at least Q20
                 Insert size: 152000; agarose-fp
                 Insert size: 169746; sum-of-contigs
                 Quality coverage: 11.31x in Q20 bases; agarose-fp
                 Quality coverage: 10.13x in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 10 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1     6384: contig of 6384 bp in length
            *    6385     6484: gap of unknown length
            *    6485    37411: contig of 30927 bp in length
            *   37412    37511: gap of unknown length
            *   37512    46351: contig of 8840 bp in length
            *   46352    46451: gap of unknown length
            *   46452    51816: contig of 5365 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (05-MAR-2003) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Mar 10, 1997 this sequence version replaced gi:1772950.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome X, constructed by the Sanger Centre Chromosome X Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/ChrX
            RP3-323B6 is from the library RPCI-3 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2.

            -------------- Genome Center
                Center: Baylor College of Medicine
                Center code: BCM
                Web site: http://www.hgsc.bcm.tmc.edu/
                Drafting Center Code: BCM
                Contact: hgsc-help@bcm.tmc.edu
            -------------- Project Information
                Center project name: HDJU
                Center clone name: RP11-355N1
            -------------- Summary Statistics
                Sequencing vector: Plasmid;
                Chemistry: Dye-terminator Big Dye: 100% of reads
                Assembly program: Phrap; version 0.990329
                Consensus quality: 150350 bases at least Q40
                Consensus quality: 150698 bases at least Q30
                Consensus quality: 151119 bases at least Q20
                Estimated insert size: 144092; sum-of-contigs estimation
                Quality coverage: 14x in Q20 bases; sum-of-contigs estimation
            --------------
            * NOTE: Estimated insert size may differ from sequence length
            *   (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2895: contig of 2895 bp in length
            *     2896     2995: gap of unknown length
            *     2996    16175: contig of 13180 bp in length
            *    16176    16275: gap of unknown length
            *    16276    56442: contig of 40167 bp in length
            *    56443    56542: gap of unknown length
            *    56543    99843: contig of 43301 bp in length
            *    99844    99943: gap of unknown length
            *    99944   153201: contig of 53258 bp in length.

COMMENT     On Jan 31, 2002 this sequence version replaced gi:17977520.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.
            Reports of lowest quality individual bases and measures of base
            quality are listed below. Description of the metrics can be found
            at URL:
            http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

            -------------- Summary Statistics
                Center project name: H_NH0774G05
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. John D.
            McPherson, Department of Genetics, Washington University, St. Louis
            MO. For additional information about the map position of this
            sequence, see http://genome.wustl.edu/gsc

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is AC079084.  Actual start of this
            clone is at base position 1 of RP11-774G5; actual end is at base
            position 217985 of RP11-774G5.

RESULT 31
HS141H5/c
LOCUS       HS141H5               121600 bp    DNA     linear   PRI 05-JUN-2003
DEFINITION  Human DNA sequence from clone RP6-141H5 on chromosome Xq22.1-23
            Contains the 3' end of the gene for a novel protein with von
            Willebrand factor type C domains, complete sequence.
ACCESSION   AL049176
VERSION     AL049176.3  GI:4808226
KEYWORDS    HTG; von Willebrand factor type C.
SOURCE      Homo sapiens (human)
  ORGANISM  Homo sapiens

  TITLE     Direct Submission
  JOURNAL   Submitted (05-JUN-2003) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On May 12, 1999 this sequence version replaced gi:4495007.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
```

```
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome X, constructed by the Sanger Centre Chromosome X Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/ChrX
            RP6-141H5 is from the library RPCI-6 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pPAC4
            This sequence is the entire insert of clone RP6-141H5.

            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 116372 bases at least Q40
            Consensus quality: 119969 bases at least Q30
            Consensus quality: 122718 bases at least Q20
            Insert size: 124672; sum-of-contigs
            Insert size: 168914; 5.4% error; agarose-fp
            Quality coverage: 2.88x in Q20 bases; sum-of-contigs Quality
            coverage: 2.51x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 26 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3262: contig of 3262 bp in length

            Center project name: zK172B2
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 274515 bases at least Q40
            Consensus quality: 275937 bases at least Q30
            Consensus quality: 276861 bases at least Q20
            Insert size: 280640; sum-of-contigs
            Insert size: 261465; 4.0% error; agarose-fp
            Quality coverage: 9.23x in Q20 bases; sum-of-contigs Quality
            coverage: 10.00x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 17 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1     6899: contig of 6899 bp in length
            *    6900     6999: gap of 100 bp
            *    7000    20575: contig of 13576 bp in length

            ----------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 17 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1731: contig of 1731 bp in length
            *     1732     1831: gap of unknown length
            *     1832     4275: contig of 2444 bp in length
            *     4276     4375: gap of unknown length
            *     4376     6562: contig of 2187 bp in length
            *     6563     6662: gap of unknown length
            *     6663     9713: contig of 3051 bp in length
            *     9714     9813: gap of unknown length
            *     9814    13035: contig of 3222 bp in length

  JOURNAL   Submitted (07-SEP-2004) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            zfish-help@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Sep 9, 2004 this sequence version replaced gi:51890366.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: zfish-help@sanger.ac.uk
            -------------- Project Information
            Center project name: zK205B10
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 149837 bases at least Q40
            Consensus quality: 150168 bases at least Q30
            Consensus quality: 150366 bases at least Q20
            Insert size: 150647; sum-of-contigs
            Insert size: 157117; 1.3% error; agarose-fp
            Quality coverage: 8.56x in Q20 bases; sum-of-contigs Quality
            coverage: 8.40x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    21342: contig of 21342 bp in length
            *    21343    21442: gap of 100 bp
            *    21443    23542: contig of 2100 bp in length
            *    23543    23642: gap of 100 bp
            *    23643    56824: contig of 33182 bp in length
            *    56825    56924: gap of 100 bp
            *    56925   140273: contig of 83349 bp in length
            *   140274   140373: gap of 100 bp
            *   140374   151047: contig of 10674 bp in length.

  TITLE     Direct Submission
```

```
JOURNAL   Submitted (16-MAY-2001) Sanger Centre, Hinxton, Cambridgeshire,
          CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
          requests: clonerequest@sanger.ac.uk
COMMENT   On Apr 27, 2001 this sequence version replaced gi:13752046.
          During sequence assembly data is compared from overlapping clones.
          Where differences are found these are annotated as variations
          together with a note of the overlapping clone name. Note that the
          variation annotation may not be found in the sequence submission
          corresponding to the overlapping clone, as we submit sequences with
          only a small overlap as described above.
          This sequence was finished as follows unless otherwise noted: all
          regions were either double-stranded or sequenced with an alternate
          chemistry or covered by high quality data (i.e., phred quality >=
          30); an attempt was made to resolve all sequencing problems, such
          as compressions and repeats; all regions were covered by at least
          one plasmid subclone or more than one M13 subclone; and the
          assembly was confirmed by restriction digest. The following
          abbreviations are used to associate primary accession numbers given
          in the feature table with their source databases: Em:, EMBL; Sw:,
          SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
          database can be found at
          http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
          was generated from part of bacterial clone contigs of human
          chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping
          Group.  Further information can be found at
          http://www.sanger.ac.uk/HGP/Chr9
          RP11-373O10 is from the library RPCI-11.2 constructed by the group
          of Pieter de Jong. For further details see
          http://www.chori.org/bacpac/home.htm
          VECTOR: pBACe3.6
          This sequence is the entire insert of clone RP11-373O10 The true
          left end of clone RP11-82L2 is at 128987 in this sequence. The true
          right end of clone RP11-346G21 is at 9227 in this sequence.

            Center project name: zK192K11
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 247462 bases at least Q40
            Consensus quality: 248434 bases at least Q30
            Consensus quality: 249070 bases at least Q20
            Insert size: 251650; sum-of-contigs
            Insert size: 239884; 3.5% error; agarose-fp
            Quality coverage: 10.19x in Q20 bases; sum-of-contigs Quality
            coverage: 10.69x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     5351: contig of 5351 bp in length
```

COMMENT     On Jun 21, 2002 this sequence version replaced gi:21065395.
            Draft Sequence Produced by Genome Therapeutics Corp, 100 Beaver
            Street, Waltham, MA 02453, USA
            http://www.genomecorp.com
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 10, constructed by the Sanger Centre Chromosome 10
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr10
            RP11-472K8 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6.

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 7 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

            Center project name: zK70K13
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 289331 bases at least Q40
            Consensus quality: 291856 bases at least Q30
            Consensus quality: 293478 bases at least Q20
            Insert size: 296706; sum-of-contigs
            Insert size: 225769; 2.9% error; agarose-fp
            Quality coverage: 6.22x in Q20 bases; sum-of-contigs Quality
            coverage: 9.16x in Q20 bases; agarose-fp
            --------------
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 25 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3928: contig of 3928 bp in length
            *     3929     4028: gap of 100 bp
            *     4029     8417: contig of 4389 bp in length

            Center project name: zK189A9
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 198295 bases at least Q40
            Consensus quality: 198730 bases at least Q30
            Consensus quality: 199141 bases at least Q20
            Insert size: 200052; sum-of-contigs
            Insert size: 193380; 3.4% error; agarose-fp
            Quality coverage: 9.52x in Q20 bases; sum-of-contigs Quality
            coverage: 9.92x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 8 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     5799: contig of 5799 bp in length
            *     5800     5899: gap of 100 bp

            Center project name: zC285C10
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 152392 bases at least Q40
            Consensus quality: 153620 bases at least Q30
            Consensus quality: 154402 bases at least Q20
            Insert size: 155578; sum-of-contigs
            Insert size: 156602; 1.5% error; agarose-fp
            Quality coverage: 6.30x in Q20 bases; sum-of-contigs Quality
            coverage: 6.26x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 11 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    28552: contig of 28552 bp in length
            *    28553    28652: gap of 100 bp
            *    28653    32448: contig of 3796 bp in length
            *    32449    32548: gap of 100 bp
            *    32549    46601: contig of 14053 bp in length
            *    46602    46701: gap of 100 bp
            *    46702    54418: contig of 7717 bp in length
            *    54419    54518: gap of 100 bp
            *    54519    79156: contig of 24638 bp in length
            *    79157    79256: gap of 100 bp
            *    79257    90677: contig of 11421 bp in length
            *    90678    90777: gap of 100 bp
            *    90778    95922: contig of 5145 bp in length
            *    95923    96022: gap of 100 bp
            *    96023   100602: contig of 4580 bp in length
            *   100603   100702: gap of 100 bp
            *   100703   125015: contig of 24313 bp in length
            *   125016   125115: gap of 100 bp
            *   125116   150124: contig of 25009 bp in length
            *   150125   150224: gap of 100 bp
            *   150225   156578: contig of 6354 bp in length.

            Center project name: zK64E1
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 150089 bases at least Q40
            Consensus quality: 150989 bases at least Q30
            Consensus quality: 151632 bases at least Q20
            Insert size: 152647; sum-of-contigs
            Insert size: 169881; 7.1% error; agarose-fp
            Quality coverage: 10.12x in Q20 bases; sum-of-contigs Quality
            coverage: 9.68x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 14 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1     9129: contig of 9129 bp in length
            *    9130     9229: gap of 100 bp

            -------------- Project Information
            Center project name: zK52D15
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 216083 bases at least Q40
            Consensus quality: 216675 bases at least Q30
            Consensus quality: 216971 bases at least Q20
            Insert size: 218101; sum-of-contigs
            Insert size: 195570; 5.6% error; agarose-fp
            Quality coverage: 8.49x in Q20 bases; sum-of-contigs Quality
            coverage: 9.59x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 7 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     6174: contig of 6174 bp in length
            *     6175     6274: gap of 100 bp
            *     6275    10497: contig of 4223 bp in length
            *    10498    10597: gap of 100 bp
            *    10598    49931: contig of 39334 bp in length
            *    49932    50031: gap of 100 bp
            *    50032   118150: contig of 68119 bp in length
            *   118151   118250: gap of 100 bp
            *   118251   146821: contig of 28571 bp in length
            *   146822   146921: gap of 100 bp
            *   146922   186335: contig of 39414 bp in length
            *   186336   186435: gap of 100 bp
            *   186436   218701: contig of 32266 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (15-MAY-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On May 16, 2001 this sequence version replaced gi:13751553.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP11-447M22 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-447M22 It may be shorter because we sequence overlapping
```

```
          sections only once, except for a 100 base overlap.
          The true left end of clone RP4-708F5 is at 50513 in this sequence.
          The true right end of clone RP4-682J15 is at 100 in this sequence.

            Center project name: zC266K13
            ---------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 153933 bases at least Q40
            Consensus quality: 154487 bases at least Q30
            Consensus quality: 154866 bases at least Q20
            Insert size: 156142; sum-of-contigs
            Insert size: 159217; 0.8% error; agarose-fp
            Quality coverage: 6.01x in Q20 bases; sum-of-contigs Quality
            coverage: 5.90x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 10 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    44418: contig of 44418 bp in length
            *    44419    44518: gap of 100 bp

            Center project name: zK70K13
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 289331 bases at least Q40
            Consensus quality: 291856 bases at least Q30
            Consensus quality: 293478 bases at least Q20
            Insert size: 296706; sum-of-contigs
            Insert size: 225769; 2.9% error; agarose-fp
            Quality coverage: 6.22x in Q20 bases; sum-of-contigs Quality
            coverage: 9.16x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 25 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3928: contig of 3928 bp in length

            Insert size: 159156; 13.8% error; agarose-fp
            Quality coverage: 7.39x in Q20 bases; sum-of-contigs Quality
            coverage: 7.54x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 7 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1    11615: contig of 11615 bp in length

            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 191941 bases at least Q40
            Consensus quality: 192830 bases at least Q30
            Consensus quality: 193638 bases at least Q20
            Insert size: 194311; sum-of-contigs
            Insert size: 184045; 2.4% error; agarose-fp
            Quality coverage: 6.41x in Q20 bases; sum-of-contigs Quality
            coverage: 6.89x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 11 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     4825: contig of 4825 bp in length
            *     4826     4925: gap of 100 bp
            *     4926    14966: contig of 10041 bp in length
            *    14967    15066: gap of 100 bp
            *    15067    17900: contig of 2834 bp in length
            *    17901    18000: gap of 100 bp
            *    18001    22764: contig of 4764 bp in length
            *    22765    22864: gap of 100 bp

            Center project name: zK12N16
            ---------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 192957 bases at least Q40
            Consensus quality: 193980 bases at least Q30
            Consensus quality: 194701 bases at least Q20
            Insert size: 197830; sum-of-contigs
            Insert size: 204603; 6.7% error; agarose-fp
            Quality coverage: 9.51x in Q20 bases; sum-of-contigs Quality
            coverage: 9.54x in Q20 bases; agarose-fp
            ----------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 15 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    22618: contig of 22618 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (10-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 10, 2003 this sequence version replaced gi:23096179.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

            Center project name: zC134M19
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 317403 bases at least Q40
            Consensus quality: 319890 bases at least Q30
            Consensus quality: 321680 bases at least Q20
            Insert size: 324241; sum-of-contigs
            Insert size: 167531; 3.4% error; agarose-fp
            Quality coverage: 6.43x in Q20 bases; sum-of-contigs Quality
            coverage: 12.99x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 23 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     9379: contig of 9379 bp in length

```
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 15 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    10834: contig of 10834 bp in length
            *    10835    10934: gap of 100 bp
            *    10935    15833: contig of 4899 bp in length
            *    15834    15933: gap of 100 bp
            *    15934    43416: contig of 27483 bp in length
            *    43417    43516: gap of 100 bp
            *    43517    50746: contig of 7230 bp in length
            *    50747    50846: gap of 100 bp
            *    50847    56683: contig of 5837 bp in length

            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 206726 bases at least Q40
            Consensus quality: 211339 bases at least Q30
            Consensus quality: 214628 bases at least Q20
            Insert size: 218188; sum-of-contigs
            Insert size: 163802; 4.5% error; agarose-fp
            Quality coverage: 7.02x in Q20 bases; sum-of-contigs Quality
            coverage: 11.27x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 28 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    25610: contig of 25610 bp in length

            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 219065 bases at least Q40
            Consensus quality: 220415 bases at least Q30
            Consensus quality: 221446 bases at least Q20
            Insert size: 222975; sum-of-contigs
            Insert size: 218290; 5.1% error; agarose-fp
            Quality coverage: 6.26x in Q20 bases; sum-of-contigs Quality
            coverage: 6.49x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 13 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

TITLE Direct Submission
JOURNAL Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On May 10, 2003 this sequence version replaced gi:24942723.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

---------- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
---------- Project Information
Center project name: GFNH
Center clone name: CH230-18C6
---------- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 222835 bases at least Q40
Consensus quality: 225635 bases at least Q30
Consensus quality: 228117 bases at least Q20
Estimated insert size: 236184; sum-of-contigs estimation
Quality coverage: 9x in Q20 bases; sum-of-contigs estimation
----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 4 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 230804: contig of 230804 bp in length
* 230805 230904: gap of unknown length
* 230905 232373: contig of 1469 bp in length
* 232374 232473: gap of unknown length
* 232474 233531: contig of 1058 bp in length
* 233532 233631: gap of unknown length
* 233632 236551: contig of 2920 bp in length.

Contact: zfish-help@sanger.ac.uk

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.
Repeat names beginning 'Dr' were identified by the Recon repeat discovery system (Zhirong Bao and Sean Eddy, submitted), and those beginning 'drr' were identified by Rick Waterman (Stephen Johnson lab, WashU). For further information see http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml CH211-231F6 is from a CHORI-211 BAC library
VECTOR: pTARBAC2.1.

Contact: sapiens@watson.wustl.edu
---------- Summary Statistics
Center project name: H_DJ1107K15
----------.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7 , send mailto:egreen@nhgri.nih.gov , or see http://genome.wustl.edu

SOURCE INFORMATION:
This clone was derived from human PAC library RPCI-5, prepared by Pieter de Jong and coworkers at http://www.chori.org using the method described by Ioannou et al., Nature Genetics 6:84-9 (1994). The library is from one male donor.
The clone may be obtained either from Genome Systems, Inc. (http://www.genomesystems.com) or Research Genetics, Inc. (http://www.resgen.com); or from Pieter de Jong.
VECTOR: pCYPAC2

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP5-942I16, 200 bp overlap.
Actual start of this clone is at base position 197 of RP5-1107K15
actual end is at base position 134084 of RP5-1107K15.

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 13 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     This GSS is part of a random genomic sequencing program of thirteen
            yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces
            exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii,
            Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces
            lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia
            angusta, Debaryomyces hansenii var.  hansenii, Pichia sorbitophila,
            Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to
            5 kb were prepared and both extremities were sequenced. See
            keywords for description of this sequence and for the sequence of
            the other extremity of this insert.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
```

EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
```

Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the European Drosophila Genome Project (EDGP) -
            http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC
            library (Dros BAC) was made by Alain Billaud at CEPH (Centre
            d'Etude du Polymorphisme Humain) with funding provided by a MRC
            project grant. The DNA was prepared from embryos by Alain Bucheton
            and Genevieve Payan. It has been constructed in the vector
            pBeloBAC11.

                     /clone_lib="Plasmodium falciparum 3D7 asexual cDNA"
                     /note="Vector: pBluescript SK plus; Site_1: EcoRI; Site_2:
                     XhoI; Library was constructed by Debopam Chakrabarti.
                     Total RNA samples were isolated from mixed stage
                     saponin(0.1%)-lysed P. falciparum 3D7 infected
                     erythrocytes by the acidic guanidinium-phenol chloroform
                     method. The poly A+ RNA was isolated by the polyAT-Tract
                     mRNA isolation system (Promega, WI) using streptavidin
                     Magnesphere particles. Directional cDNA libraries were
                     constructed by oligo d(T) priming of poly(A)+ RNA (5mg)
                     into EcoRI and XhoI sites of l ZapII vector using the Zap
                     cDNA synthesis kit (Stragene, CA). The average size of the
                     cDNA inserts in the library was between 1.0 and 1.5kb.
                     Clones were mass excised using the ExAssist helper phage
                     (Stratagene), the phagemids were precitptated with PEG
                     8000 and extracted with phenol/chloroform. Phagemid DNA
                     was electroporated into DH10B cells."

COMMENT Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector pBeloBAC11.

            Cloned unidirectionally. Poly(A)+ RNA was concentrated and purified
            using Dynabeads (Dynal) and mRNA eluted for first strand synthesis.
            First strand cDNA was created using MMLV RT (Powerscript, Clontech)
            and primed with oligo(dT) with XhoI site (primer CDSIII/3-XhoI) and
            5'SMART 'anchor' added using chimeric DNA-RNA oligo
            (SMART-NotI-r-GGG). 12 PCR cycles were done using first strand and
            primers specific to SMART oligo(5'PCR-primer) and 3'
            end(XhoI-No-dT). Double stranded cDNA was digested using XhoI/NotI,
            fractioned on Chroma-spin 400 columns (Clontech) and ligated to
            digested pGEM-11zf(+) plasmid. Chemically competent DH10B cells
            were used as host cells. Library constructed by Joanna Carlson of
            North Carolina State University.
            Seq primer: Sp6.

                     /note="Vector: pAD-GAL4;. At 20-25% parasitemia, blood was
                     collected from BALB/cByJ mice infected with Py17XL
                     parasites, and leukocytes removed by passage over
                     microcrystalline cellulose collumns. Total RNA was
                     isolated using the guanidinium isothiocyanate method, and
                     mRNA isolated using oligo(dT)-cellulose chromatography.
                     First strand cDNA synthesis was completed using a 50-base
                     primer and reverse transcriptase in the presence of
                     5-methyl dCTP. After second strand synthesis, uneven
                     termini were treated with Pfu DNA polymerase and EcoRI
                     adaptors ligated to the blunt ends. The sample was cleaved
                     with XhoI and separated on a Sephacryl S-500 column.
                     Size-fractionated cDNA was precipitated and ligated to
                     HybriZAP arms directionally using EcoRI-XhoI cleaved arms.
                     After packaging, the phagemid vector (pAD-GAL4) was
                     excised from the HybriZAP vector and plasmid DNA
                     isolated."

            - Web : www.genoscope.cns.fr)
COMMENT     Determination of this BAC-end sequence was carried out as part of a
            collaboration with the Berkeley Drosophila Genome Project (BDGP).
            The BDGP is constructing a physical map of the Drosophila
            melanogaster genome using these BACs. For further information
            please see  http://www.fruitfly.org The BDGP Drosophila
            melanogaster BAC library was prepared by Kazutoyo Osoegawa and
            Aaron Mammoser in Pieter de Jong's laboratory in the Department of
            Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
            NY. The library is named RPCI-98 and was constructed by partial
            EcoRI digestion of Drosophila DNA provided by the BDGP from the
            isogenic strain y2; cn bw sp, the same strain used for the BDGP's
            P1 and EST libraries. A more detailed description of the library
            and how to order individual BAC clones, the entire library, or
            filters for hybridization from the BACPAC Resource Center can be
            found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

PT   Diagnosing, assessing susceptibility and treating schizophrenia, involves
PT   observing regulator of G-protein signaling 4, RGS4 levels in a subject.
XX
PS   Claim 1; Page 20-33; 112pp; English.
XX
CC   This invention relates to a novel method for diagnosing schizophrenia or
CC   determining susceptibility to schizophrenia in a human. The method
CC   comprises obtaining from a patient a DNA sample and detecting variations
CC   in the regulator of G-protein signalling 4 (RGS4) gene. Alternatively,
CC   the method involves measuring RGS4 mRNA or protein levels in a tissue
CC   sample from the patient and determining if there is a reduced level. The
CC   method of the invention is useful for diagnosing and determining
CC   susceptibility to schizophrenia. The invention also comprises a method
CC   that is useful for treating schizophrenia which includes a prophylactic
CC   treatment. The method of genotyping polymorphic variants in the RGS-4
CC   gene is applied to diagnosing pathologies of the schizophrenic spectrum,
CC   such as in particular schizotypy, schizoid individuals, etc. This method
CC   offers the possibility of diagnosing schizophrenia by a biological test
CC   and no longer exclusively by clinical evaluations. The present sequence
CC   represents the genomic DNA encoding the human regulator of G-protein
CC   signalling 4 (RGS4) protein used in the method of the invention. The gene
CC   for the RGS4 protein is located on human chromosome 1q21-22

PT Novel isolated nucleic acid molecules (markers) overexpressed in ovarian
PT cancer cells as compared to their normal non-cancerous ovarian cells are
PT used to characterize stage, grade, histological type of ovarian cancer.
XX
PS Disclosure; SEQ ID NO 17724; 106pp; English.
XX
CC The invention relates to nucleic acid markers which are overexpressed in
CC ovarian cancer cells as compared to their expression in normal (i.e. non-
CC cancerous) ovarian cells. The invention also relates to polypeptides
CC encoded by the markers, antibodies that selectively bind to the
CC polypeptides, a method of inhibiting ovarian cancer in a patient at risk
CC of developing ovarian cancer involving inhibiting expression of a gene
CC corresponding to a marker of the invention and a method of treating a
CC patient afflicted with ovarian cancer comprising providing to cells of
CC the patient an antisense oligonucleotide complementary to a marker of the
CC invention. The markers are useful for assessing if a patient is afflicted
CC with ovarian cancer, which involves comparing the level of expression of
CC a marker in a patient sample and a normal level of expression of the
CC marker in a control non-ovarian cancer sample. A difference between the
CC expression levels indicates ovarian cancer. The level of expression of a
CC marker corresponds to a secreted protein or to a transcribed
CC polynucleotide or its portion. The level of expression of the marker is
CC assessed by detecting the presence in the sample, a protein or protein
CC fragment corresponding to the marker. The presence of protein or protein
CC fragment is detected using an antibody that specifically binds with the
CC protein or protein fragment. Alternatively, the level of expression of
CC the marker is assessed by detecting the presence of a transcribed
CC polynucleotide which anneals with the marker or anneals with a portion of
CC the polynucleotide comprising the marker, under stringent conditions. The
CC marker is also used for monitoring the progression of ovarian cancer in a
CC patient which involves detecting expression of the marker in a patient
CC sample at a first point in time, repeating the method at a subsequent
CC time and comparing the level of expression. The method is carried out
CC using an ovarian tissue sample. A composition comprising a marker,
CC polypeptide or antibody of the invention is used to treat ovarian cancer.
CC This sequence represents a human ovarian cancer DNA marker of the
CC invention.

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 244; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PS   Claim 1; SEQ ID NO 149; 24pp; English.
XX
CC   The present invention relates to chemically modified DNA sequences of
CC   signal transduction associated genes. The DNA sequences are chemically
CC   modified using a solution of bisulphite, hydrogen sulphite or disulphite.
CC   Also disclosed are oligonucleotides and/or PNA oligomers for detecting
CC   the cytosine methylation state (CpG islands) of these genes, and a method
CC   for the diagnosis and/or therapy of genetic and epigenetic parameters of
CC   genes associated with signal transduction. The genomic DNA can be
CC   obtained from cells or cellular components which contain DNA, e.g. cell
CC   lines, biopsies, blood, sputum, stool, urine, cerebral-spinal fluid,
CC   tissue embedded in paraffin such as tissue from eyes, intestine, kidney,
CC   brain, heart, prostate, lung, breast or liver, histologic object slides,
CC   and all their possible combinations. The sequences of the invention are
CC   useful for the diagnosis and therapy of diseases associated with signal
CC   transduction e.g. solid tumours and cancer. ABK31158-ABK31545 represent
CC   chemically pretreated genomic DNA sequences of different genes associated
CC   with signal transduction, or their complementary sequences. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from the
CC   European Patent Office

PT Nucleic acid, useful for diagnosis and therapy of diseases associated
PT with cell signaling e.g. cancer, comprises chemically modified genomic
PT sequences of genes associated with cell signaling.
XX
PS Claim 1; SEQ ID NO 171; 24pp + Sequence Listing; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of at least
CC 18 bases of a segment of chemically pretreated DNA of genes associated
CC with cell signalling. The activity of the modified sequences of the
CC invention may be described as cytostatic. The object of the invention is
CC to provide the chemically modified DNA of genes associated with cell
CC signalling, as well as oligonucleotides and/or PNA-oligomers for
CC detecting cytosine methylations, as well as a method which is
CC particularly suitable for the diagnosis and/or therapy of genetic and
CC epigenetic parameters of genes associated with cell signalling. The
CC chemically modified DNA provided by the invention is useful for diagnosis
CC and therapy of diseases such as solid tumours and cancer. The sequences
CC given in records ABL70111-ABL70626 represent chemically pre-treated
CC genomic DNA's of genes associated with cell signalling. Note: The
CC sequence data for this patent is not represented in the printed
CC specification, but is based on sequence information supplied by the
CC European Patent Office

PT Novel nucleic acid useful for diagnosis and therapy of diseases
PT associated with development genes such as diabetes, comprises a sequence
PT of a segment of chemically pretreated DNA of genes associated with
PT development.
XX
PS Claim 1; SEQ ID NO 177; 27pp; English.
XX
CC The invention relates to a nucleic acid (I) comprising a sequence at
CC least 18 bases in length of a segment of chemically pretreated DNA (II)
CC of genes associated with development selected from 87 genes listed in the
CC specification such as ACCPN, ADFN, or AFD1 and comprising one of 350
CC sequences (ABN79984-ABN80333) or their complements. The invention is
CC useful for the diagnosis or therapy of diseases associated with
CC development genes, in particular disease related to homeobox containing
CC genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes
CC associated with congenital heart disease, epilepsy, diseases related to
CC histone deacetylation, Currarino syndrome, diseases related with the
CC development of the brain and limb girdle muscular dystrophy and dwarfism.
CC Oligomers specific to each of the genes are useful for detecting the
CC methylation state of all CpG dinucleotides within the 350 sequences or
CC (II) and their complementary sequences, as primer oligonucleotides for
CC the amplification of the 350 sequences, (II) and/or their complements and
CC as oligomer probes for detecting the cytosine methylation state and/or
CC single nucleotide polymorphisms (SNPs). Note: The sequence data for this
CC patent did not form part of the printed specification but is based on
CC sequence information supplied to Derwent by the European Patent Office

PT   New isolated nucleic acid molecule that encodes a plant protein or its
PT   fragment, useful for isolating a variety of agronomically significant
PT   genes associated with plant growth, quality or yield, and as molecular
PT   tags to map genes.
XX
PS   Claim 1; SEQ ID NO 10189; 34pp; English.
XX
CC   The invention relates to 17880 cotton expressed sequence tags (ESTs;
CC   ACN45220-ACN63099). The ESTs were isolated from cDNA libraries generated
CC   from primed or non-primed seeds from variety DP50B, mature seeds from
CC   variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
CC   tissue, developing fibres, carpel walls and septa from variety
CC   Nucotton33B. The invention also relates to substantially purified
CC   proteins or their fragments encoded by nucleic acid molecules of the
CC   invention, and to transformed plants having a nucleic acid construct
CC   comprising a nucleic acid of the invention. The cotton ESTs are useful as
CC   molecular tags to isolate genetic regions, to isolate genes, to map
CC   genes, to determine gene function and to determining whether genes are
CC   members of a particular gene family. The nucleic acid molecules may be
CC   used for isolating a variety of agronomically significant genes
CC   associated with plant growth, quality, yield, and could also serve as
CC   links in metabolic and catabolic pathways. The nucleic acid molecules are
CC   also useful for identifying genes important in initiating and maintaining
CC   seed germination or that may be used to mitigate stresses encountered
CC   during seed germination. The ESTs additionally enable the acquisition of
CC   promoters and cis-regulatory elements which will be useful to express
CC   agronomically significant genes in these tissues and/or other tissues,
CC   and also permits the acquisition of molecular markers useful in breeding
CC   schemes, genetic and molecular mapping, and in cloning of agronomically
CC   significant genes. The nucleic acid molecules are further useful for
CC   detecting the expression level or pattern of a protein or mRNA and for
CC   detecting the presence or quantity of a protein by tissue printing. The
CC   present sequence represents a specifically claimed EST isolated from a
CC   cotton variety Nucotton33B androecium tissue cDNA library (LIB3828). The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from the US
CC   patent office at seqdata.uspto.gov/sequence.html?DocID=US20040123340

PT Detecting and differentiating between hematopoietic cell proliferative
PT disorders, comprises contacting a target nucleic acid with a reagent that
PT distinguishes between methylated and non-methylated CpG dinucleotides.
XX
PS Claim 28; SEQ ID NO 240; 117pp; English.
XX
CC The present invention describes a method for detecting and
CC differentiating between haematopoietic cell proliferative disorders
CC associated with at least 1 gene and/or their regulatory regions in a
CC subject. The method comprises contacting a target nucleic acid in a
CC biological sample obtained from the subject with at least 1 reagent,
CC which distinguishes between methylated and non-methylated CpG
CC dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118
CC represent specifically claimed nucleotide sequences from the present
CC invention. Oligonucleotides from the present invention can be used: for
CC differentiating between healthy haematopoietic cells and proliferative
CC disorder haematopoietic cells; for differentiating between acute
CC lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
CC determining the cytosine methylation state and/or single nucleotide
CC polymorphisms (SNPs) of haematopoietic cell proliferation disorder
CC related sequences and their complements; and as primers for the
CC amplification of haematopoietic cell proliferation disorder related DNA
CC sequences. The nucleotide sequences from the present invention can also
CC be used for detecting a predisposition to, differentiation between
CC subclasses, diagnosis, prognosis, treatment and/or monitoring of
CC haematopoietic cell proliferative disorders. The present method enables a
CC highly specific classification of haematopoietic cell proliferative
CC disorders allowing for improved and informed treatment of patients

PS Claim 22; Page 115-117; 219pp; English.
XX
CC The present invention describes a method for determining the methylation
CC status of CpG dinucleotides within the genes for oestrogen receptor, p21,
CC p27, p16, progesterone receptor, myoglobin, pcna, cdc2, c-erB2, p53
CC and/or CEA, which comprises contacting the target nucleic acid with a
CC reagent that distinguishes between methylated and non-methylated CpG
CC dinucleotides, and determining from the methylation status of the CpG
CC positions the presence of a colon cancer. A set of oligomers or peptide
CC nucleic acid (PNA)-oligomers can be used as probes for determining the
CC cytosine methylation state and/or single nucleotide polymorphisms (SNP)
CC of a corresponding genomic DNA by analysis of a chemically pretreated
CC genomic DNA. The pretreated genomic DNA is useful for the determination
CC of the methylation status of a corresponding genomic DNA and/or detection
CC of SNPs. The methods and pretreated genomic DNA are also useful for the
CC characterisation, classification, diagnosis and differentiation of colon
CC cell proliferative disorders. ACF62752 to ACF63278 represent sequences
CC used in the exemplification of the present invention

PT Novel isolated nucleic acid molecules (markers) overexpressed in ovarian
PT cancer cells as compared to their normal non-cancerous ovarian cells are
PT used to characterize stage, grade, histological type of ovarian cancer.
XX
PS Disclosure; SEQ ID NO 5048; 106pp; English.
XX
CC The invention relates to nucleic acid markers which are overexpressed in
CC ovarian cancer cells as compared to their expression in normal (i.e. non-
CC cancerous) ovarian cells. The invention also relates to polypeptides
CC encoded by the markers, antibodies that selectively bind to the
CC polypeptides, a method of inhibiting ovarian cancer in a patient at risk
CC of developing ovarian cancer involving inhibiting expression of a gene
CC corresponding to a marker of the invention and a method of treating a
CC patient afflicted with ovarian cancer comprising providing to cells of
CC the patient an antisense oligonucleotide complementary to a marker of the
CC invention. The markers are useful for assessing if a patient is afflicted
CC with ovarian cancer, which involves comparing the level of expression of
CC a marker in a patient sample and a normal level of expression of the
CC marker in a control non-ovarian cancer sample. A difference between the
CC expression levels indicates ovarian cancer. The level of expression of a
CC marker corresponds to a secreted protein or to a transcribed
CC polynucleotide or its portion. The level of expression of the marker is
CC assessed by detecting the presence in the sample, a protein or protein
CC fragment corresponding to the marker. The presence of protein or protein
CC fragment is detected using an antibody that specifically binds with the
CC protein or protein fragment. Alternatively, the level of expression of
CC the marker is assessed by detecting the presence of a transcribed
CC polynucleotide which anneals with the marker or anneals with a portion of
CC the polynucleotide comprising the marker, under stringent conditions. The
CC marker is also used for monitoring the progression of ovarian cancer in a
CC patient which involves detecting expression of the marker in a patient
CC sample at a first point in time, repeating the method at a subsequent
CC time and comparing the level of expression. The method is carried out
CC using an ovarian tissue sample. A composition comprising a marker,
CC polypeptide or antibody of the invention is used to treat ovarian cancer.
CC This sequence represents a human ovarian cancer DNA marker of the
CC invention.

PT   New nucleic acid fragments from chemically treated angiogenesis-
PT   associated genes, useful for determining methylation status, e.g. in
PT   diagnosis or treatment of cancer.
XX
PS   Claim 1; SEQ ID NO 90; 41pp + Sequence Listing; German.
XX
CC   The invention relates to a nucleic acid (I) comprising a segment of 18
CC   bases of chemically pretreated DNA of angiogenesis-associated genes (II)
CC   having sequences (ABQ66971-ABQ67178) or their complements. (I), also
CC   related oligomers, are used to evaluate the methylation status and/or
CC   single-nucleotide polymorphisms, in angiogenesis-related genes, for
CC   diagnosis and treatment of eye diseases, proliferative retinopathy,
CC   neovascular glaucoma, solid tumours, inflammation, rheumatoid arthritis,
CC   diabetic retinopathy, macular degeneration caused by neovascularisation,
CC   psoriasis, arteriosclerosis, inflammatory bowel diseases, ulcers and
CC   Crohn's disease. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Detecting and differentiating between hematopoietic cell proliferative
PT   disorders, comprises contacting a target nucleic acid with a reagent that
PT   distinguishes between methylated and non-methylated CpG dinucleotides.
XX
PS   Claim 28; SEQ ID NO 386; 117pp; English.
XX
CC   The present invention describes a method for detecting and
CC   differentiating between haematopoietic cell proliferative disorders
CC   associated with at least 1 gene and/or their regulatory regions in a
CC   subject. The method comprises contacting a target nucleic acid in a
CC   biological sample obtained from the subject with at least 1 reagent,
CC   which distinguishes between methylated and non-methylated CpG
CC   dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118
CC   represent specifically claimed nucleotide sequences from the present
CC   invention. Oligonucleotides from the present invention can be used: for
CC   differentiating between healthy haematopoietic cells and proliferative
CC   disorder haematopoietic cells; for differentiating between acute
CC   lymphocytic leukaemia and acute myelogenous leukaemia; as probes for
CC   determining the cytosine methylation state and/or single nucleotide
CC   polymorphisms (SNPs) of haematopoietic cell proliferation disorder
CC   related sequences and their complements; and as primers for the
CC   amplification of haematopoietic cell proliferation disorder related DNA
CC   sequences. The nucleotide sequences from the present invention can also
CC   be used for detecting a predisposition to, differentiation between
CC   subclasses, diagnosis, prognosis, treatment and/or monitoring of
CC   haematopoietic cell proliferative disorders. The present method enables a
CC   highly specific classification of haematopoietic cell proliferative
CC   disorders allowing for improved and informed treatment of patients

PT   Novel recombinant entomopox virus vector useful for delivering
PT   polynucleotide encoding protein to vertebrate cell, comprises
PT   polynucleotide encoding protein operably linked with heterologous
PT   promoter sequence.
XX
PS   Disclosure; Page 150-175; 326pp; English.
XX
CC   The invention relates to a recombinant entomopox virus (EPV) vector,
CC   comprising a polynucleotide encoding a protein operably linked with a
CC   heterologous promoter sequence. The invention also concerns methods for
CC   providing gene therapy for genetic deficiency disorders. Vectors of the
CC   invention are useful for delivering a polynucleotide encoding a protein
CC   to a vertebrate cell preferably a mammalian cell, such as a human cell.
CC   The vector is introduced into the vertebrate cell by infection in a viral
CC   particle, or by transfection, transduction, or injection either in vitro
CC   or in vivo. The vector is useful for the delivery and expression of
CC   biologically useful proteins in gene therapy protocols, and for
CC   delivering large DNA segments for engineering of vertebrate cells.
CC   Polynucleotides of the invention have applications in techniques such as
CC   their use as insertion sites for foreign genes of interest, hybridisation
CC   probes, for chromosome and gene mapping, in PCR technologies, and in the
CC   production of sense or antisense nucleic acids. Vectors of the invention
CC   provide for stable integration and expression of heterologous DNA in host
CC   cells, and are adapted for accepting large heterologous polynucleotide
CC   inserts which can be delivered in an infected or transformed cell and
CC   expressed in a stable fraction. The current sequence represents a
CC   fragment of the genome of the genus B entomopoxvirus from amsacta moorei

PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
PS Claim 1; SEQ ID NO 64; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Sequences with even
CC numbered Seq ID numbers are the complementary sequence of the
CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC 535, except for those whose partner sequence is missing). Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT   Nucleic acid, useful for diagnosis and therapy of diseases associated
PT   with cell signaling e.g. cancer, comprises chemically modified genomic
PT   sequences of genes associated with cell signaling.
XX
PS   Claim 1; SEQ ID NO 94; 24pp + Sequence Listing; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of at least
CC   18 bases of a segment of chemically pretreated DNA of genes associated
CC   with cell signalling. The activity of the modified sequences of the
CC   invention may be described as cytostatic. The object of the invention is
CC   to provide the chemically modified DNA of genes associated with cell
CC   signalling, as well as oligonucleotides and/or PNA-oligomers for
CC   detecting cytosine methylations, as well as a method which is
CC   particularly suitable for the diagnosis and/or therapy of genetic and
CC   epigenetic parameters of genes associated with cell signalling. The
CC   chemically modified DNA provided by the invention is useful for diagnosis
CC   and therapy of diseases such as solid tumours and cancer. The sequences
CC   given in records ABL70111-ABL70626 represent chemically pre-treated
CC   genomic DNA's of genes associated with cell signalling. Note: The
CC   sequence data for this patent is not represented in the printed
CC   specification, but is based on sequence information supplied by the
CC   European Patent Office

PT   New nucleic acid derived from chemically treated metastasis genes, useful
PT   for diagnosis of cancers by analysis of cytosine methylation, also for
PT   treatment.
XX
PS   Claim 1; SEQ ID NO 62; 9pp; English.
XX
CC   The invention relates to a nucleic acid comprising at least 18 bases from
CC   a segment of the chemically pretreated DNA of genes associated with
CC   metastasis, i.e. any of ADS99709-ADS99906 human genomic sequences or any
CC   of the 19 sequences appearing as ADS99911-ADS99929. SEQ ID 2,4,6 etc are
CC   the complements of SEQ ID 1,3,5, etc. Also included are an oligomer
CC   (particularly an oligonucleotide or peptide nucleic acid) comprising at
CC   least one base sequence of at least 9 bases which hybridises to (or is
CC   identical with) the sequences referred to above, producing an array of
CC   the oligomers on a carrier, obtaining genetic and/or epigenetic
CC   parameters for diagnosis and/or therapy of diseases (or predisposition to
CC   them) by analysis of cytosine methylation and a kit comprising a
CC   bisulphite (disulphite or hydrogen sulphite) and the oligomers. In the
CC   method of above 5-unmethylated cytosines in a genomic DNA sample are
CC   converted chemically to uracil, or another base with hybridisation
CC   properties different from those of cytosine, then fragments of the
CC   treated DNA amplified (particularly by polymerase chain reaction) using
CC   the oligomers and a polymerase (preferably heat stable) to produce
CC   labelled amplicons. These are tested for hybridisation to an array of
CC   oligomers and any hybridisation detected. The amplicons are labelled with
CC   fluorescent or radioactive markers, or with a detachable mass marker to
CC   allow their detection by mass spectrometry, specifically using the matrix
CC   -assisted laser desorption/ionisation (MALDI) or electrospray techniques.
CC   To improve detection in the mass spectrometer, fragments formed in the
CC   instrument have only a single net charge (positive or negative). The
CC   genomic DNA is from e.g. a cell line, biopsy sample, blood, or paraffin-
CC   embedded tissue sample. Oligonucleotides or peptide-nucleic acids that
CC   are complementary to (or identical with) parts of the nuclei acids listed
CC   above may be used as primers for amplification of the nucleic acids or
CC   their complements, and for determining cytosine methylation status and/or
CC   single nucleotide polymorphisms in metastasis-related genes. They can be
CC   used for analysis of diseases associated with methylation of CpG
CC   dinucleotides and to determine (epi)genetic parameters for diagnosis
CC   and/or therapy of disease (or predisposition). The genomic DNA sequences
CC   are useful for diagnosis and therapy of solid tumours and cancer. The
CC   present sequence is the complementary sequence to a bisulphite treated
CC   human gene associated with metastasis. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030148327.

CC of genes associated with development selected from 87 genes listed in the
CC specification such as ACCPN, ADFN, or AFD1 and comprising one of 350
CC sequences (ABN79984-ABN80333) or their complements. The invention is
CC useful for the diagnosis or therapy of diseases associated with
CC development genes, in particular disease related to homeobox containing
CC genes (HOX), like diabetes, cancer, apoptosis related diseases, syndromes
CC associated with congenital heart disease, epilepsy, diseases related to
CC histone deacetylation, Currarino syndrome, diseases related with the
CC development of the brain and limb girdle muscular dystrophy and dwarfism.
CC Oligomers specific to each of the genes are useful for detecting the
CC methylation state of all CpG dinucleotides within the 350 sequences or
CC (II) and their complementary sequences, as primer oligonucleotides for
CC the amplification of the 350 sequences, (II) and/or their complements and
CC as oligomer probes for detecting the cytosine methylation state and/or
CC single nucleotide polymorphisms (SNPs). Note: The sequence data for this
CC patent did not form part of the printed specification but is based on
CC sequence information supplied to Derwent by the European Patent Office

XX
PT   Fragments of chemically modified genes associated with tumor suppressor
PT   genes and oncogenes, useful in designing primers and probes for analyzing
PT   diseases associated with cytosine methylation state e.g. cancer.
XX
PS   Claim 1; SEQ ID NO 10; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and oncogenes
CC   having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC   500 are missing from the sequence listing) sequences (Ss) and sequences
CC   complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC   oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC   probes for detecting the cytosine methylation state and/or single
CC   nucleotide polymorphisms and also to be used in an array for analysing
CC   diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC   probes can also be used in a method for ascertaining genetic and/or
CC   epigenetic parameters for the diagnosis and/or therapy of existing
CC   diseases or the predisposition to specific diseases, by analysing
CC   cytosine methylations. The parameters may be compared to another set of
CC   genetic and/or epigenetic parameters, the differences serving as basis
CC   for diagnosis and/or prognosis events which are disadvantageous to
CC   patients. The present sequence is one of the 533 genomic sequences
CC   derived from tumour suppressor genes and oncogenes. Sequences with even
CC   numbered Seq ID numbers are the complementary sequence of the
CC   corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC   535, except for those whose partner sequence is missing). Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT Predicting responsiveness of a subject with breast cell proliferative
PT disorder, useful for treating or differentiating breast cell
PT proliferative disorders comprises analyzing methylation pattern of a
PT genomic DNA from the subject.
XX
PS Disclosure; SEQ ID NO 270; 104pp; English.
XX
CC The invention relates to a novel method for predicting the responsiveness
CC of a subject with a cell proliferative disorder of the breast tissues to
CC a therapy comprising analysing the methylation pattern of a target
CC nucleic acid by contacting at least one of the target nucleic acids in a
CC biological sample obtained from the subject prior to or during treatment.
CC The method of the invention has cytostatic activity, and may have a use
CC in gene therapy. The set of oligonucleotides comprising at least two of
CC the oligomers are useful for detecting the cytosine methylation state
CC and/or single nucleotide polymorphisms (SNPs) within the sequences. The
CC methods, nucleic acid, oligonucleotide, and kit are useful for the
CC treatment, characterisation, classification and/or differentiation, of
CC breast cell proliferative disorders. The method is also useful for
CC predicting the responsiveness of a subject with a cell proliferative
CC disorder of the breast tissues to a therapy. The present sequence is used
CC in the exemplification of the invention.

XX
PT   New nucleic acid derived from chemically treated metastasis genes, useful
PT   for diagnosis of cancers by analysis of cytosine methylation, also for
PT   treatment.
XX
PS   Claim 1; SEQ ID NO 164; 9pp; English.
XX
CC   The invention relates to a nucleic acid comprising at least 18 bases from
CC   a segment of the chemically pretreated DNA of genes associated with
CC   metastasis, i.e. any of ADS99709-ADS99906 human genomic sequences or any
CC   of the 19 sequences appearing as ADS99911-ADS99929. SEQ ID 2,4,6 etc are
CC   the complements of SEQ ID 1,3,5, etc. Also included are an oligomer
CC   (particularly an oligonucleotide or peptide nucleic acid) comprising at
CC   least one base sequence of at least 9 bases which hybridises to (or is
CC   identical with) the sequences referred to above, producing an array of
CC   the oligomers on a carrier, obtaining genetic and/or epigenetic
CC   parameters for diagnosis and/or therapy of diseases (or predisposition to
CC   them) by analysis of cytosine methylation and a kit comprising a
CC   bisulphite (disulphite or hydrogen sulphite) and the oligomers. In the
CC   method of above 5-unmethylated cytosines in a genomic DNA sample are
CC   converted chemically to uracil, or another base with hybridisation
CC   properties different from those of cytosine, then fragments of the
CC   treated DNA amplified (particularly by polymerase chain reaction) using
CC   the oligomers and a polymerase (preferably heat stable) to produce
```

```
CC   labelled amplicons. These are tested for hybridisation to an array of
CC   oligomers and any hybridisation detected. The amplicons are labelled with
CC   fluorescent or radioactive markers, or with a detachable mass marker to
CC   allow their detection by mass spectrometry, specifically using the matrix
CC   -assisted laser desorption/ionisation (MALDI) or electrospray techniques.
CC   To improve detection in the mass spectrometer, fragments formed in the
CC   instrument have only a single net charge (positive or negative). The
CC   genomic DNA is from e.g. a cell line, biopsy sample, blood, or paraffin-
CC   embedded tissue sample. Oligonucleotides or peptide-nucleic acids that
CC   are complementary to (or identical with) parts of the nuclei acids listed
CC   above may be used as primers for amplification of the nucleic acids or
CC   their complements, and for determining cytosine methylation status and/or
CC   single nucleotide polymorphisms in metastasis-related genes. They can be
CC   used for analysis of diseases associated with methylation of CpG
CC   dinucleotides and to determine (epi)genetic parameters for diagnosis
CC   and/or therapy of disease (or predisposition). The genomic DNA sequences
CC   are useful for diagnosis and therapy of solid tumours and cancer. The
CC   present sequence is the complementary sequence to a bisulphite treated
CC   human gene associated with metastasis. Note: The sequence data for this
CC   patent did not form part of the printed specification, but was obtained
CC   in electronic format directly from USPTO at
CC   seqdata.uspto.gov/sequence.html?DocID=20030148327.

PT Identifying a stress condition to which a plant cell has been exposed and
PT producing plants with increased tolerance to these abiotic stresses.
XX
PS Claim 144; SEQ ID NO 4474; 577pp + Sequence Listing; English.
XX
CC The invention relates to identifying a stress condition to which a plant
CC cell has been exposed, comprising: (a) contacting nucleic acid
CC representative of expressed polynucleotides in the plant cell with an
CC array or probes representative of the plant cell genome; and (b)
CC detecting a profile of expressed polynucleotides in the plant cell
CC characteristic of a stress response. The method is useful in the
CC production of transgenic plants, cells and seeds and in producing plants
CC with increased tolerance to abiotic stress. The present sequence is that
CC of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used
CC in methods of the invention. Note: The sequence data for this patent is
CC not represented in the printed specification but is based on sequence
CC information supplied to Derwent by the European Patent Office

PT Recombinant DNA construct comprising a plant centromere, useful for
PT producing stably inherited michrosomes which can serve as vectors for the
PT construction of transgenic plant and animal cells.
XX
PS Claim 102; Page 453-484; 1449pp; English.
XX
CC The present invention relates to a recombinant DNA construct of a plant
CC (Arabidopsis thaliana) centromere. The constructs are useful for
CC producing stably inherited michrosomes which can serve as vectors for the
CC construction of transgenic plant and animal cells expressing selected
CC proteins such as hormones, enzymes, interleukins, clotting factors,
CC cytokines, antibodies, and growth factors

PT   New nucleic acid fragments from chemically treated angiogenesis-
PT   associated genes, useful for determining methylation status, e.g. in
PT   diagnosis or treatment of cancer.
XX
PS   Claim 1; SEQ ID NO 89; 41pp + Sequence Listing; German.
XX
CC   The invention relates to a nucleic acid (I) comprising a segment of 18
CC   bases of chemically pretreated DNA of angiogenesis-associated genes (II)
CC   having sequences (ABQ66971-ABQ67178) or their complements. (I), also
CC   related oligomers, are used to evaluate the methylation status and/or
CC   single-nucleotide polymorphisms, in angiogenesis-related genes, for
CC   diagnosis and treatment of eye diseases, proliferative retinopathy,
CC   neovascular glaucoma, solid tumours, inflammation, rheumatoid arthritis,
CC   diabetic retinopathy, macular degeneration caused by neovascularisation,
CC   psoriasis, arteriosclerosis, inflammatory bowel diseases, ulcers and
CC   Crohn's disease. Note: The sequence data for this patent did not form
CC   part of the printed specification, but was obtained in electronic format
CC   directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Novel human cancer associated protein encoded within open reading frame
PT   of cancer associated gene, useful as targets for diagnosing cancer.
XX
PS   Claim 16; SEQ ID NO 676; 182pp; English.
XX
CC   The invention relates to cancer-associated proteins (CAP) and the cancer-
CC   associated (CA) nucleic acids encoding them. The invention also relates
CC   to a method for treating cancers involving administering to a patient an
CC   inhibitor of CAP, and a method of screening for anticancer activity in a
CC   potential drug involving providing a cell that expresses a CA gene,
CC   contacting a tissue sample derived from a cancer cell with an anticancer
CC   drug candidate and monitoring the effect of the anticancer drug candidate
CC   on expression of the CA gene. The CAP proteins are useful for detecting
CC   cancer associated with expression of a CAP protein in a test cell sample
CC   and for screening for a bioactive agent capable of modulating the
CC   activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC   cancer, involving determining the expression of a CA nucleic acid in a
CC   tissue. This sequence represents a human CA gene of the invention. Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 1504; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

XX
CC Sequences AAS45296-AAS45520 represent chemically pretreated genomic DNA
CC molecules associated with the cell cycle and specific PCR primers of the
CC invention. The sequences are useful for detecting the methylation state
CC of all CpG dinucleotides in a sequence and therefore for analysing
CC associated diseases. By analysing cytosine methylations in the pretreated
CC DNA, genetic and/or epigenetic parameters for the diagnosis and therapy
CC of existing diseases or the predisposition to specific diseases can be
CC ascertained. The parameters may be compared to another set of genetic
CC and/or epigenetic parameters, the differences serving as basis for
CC diagnosis and/or prognosis events which are disadvantageous to patients.
CC The sequences of the invention are useful for the diagnosis and therapy
CC of HIV infection, neurodegenerative disorders, graft-versus-host disease,
CC aging, glomerular disease, Lewy body disease, arthritis,
CC arteriosclerosis, solid tumours and cancers

PT   Fragments of chemically modified genes associated with tumor suppressor
PT   genes and oncogenes, useful in designing primers and probes for analyzing
PT   diseases associated with cytosine methylation state e.g. cancer.
XX
PS   Claim 1; SEQ ID NO 148; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and oncogenes
CC   having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC   500 are missing from the sequence listing) sequences (Ss) and sequences
CC   complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC   oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC   probes for detecting the cytosine methylation state and/or single
CC   nucleotide polymorphisms and also to be used in an array for analysing
CC   diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC   probes can also be used in a method for ascertaining genetic and/or
CC   epigenetic parameters for the diagnosis and/or therapy of existing
CC   diseases or the predisposition to specific diseases, by analysing
CC   cytosine methylations. The parameters may be compared to another set of
CC   genetic and/or epigenetic parameters, the differences serving as basis
CC   for diagnosis and/or prognosis events which are disadvantageous to
CC   patients. The present sequence is one of the 533 genomic sequences
CC   derived from tumour suppressor genes and oncogenes. Sequences with even
CC   numbered Seq ID numbers are the complementary sequence of the
CC   corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC   535, except for those whose partner sequence is missing). Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   Werner syndrome, psoriasis, myocardial infarction, solid tumors or
PT   cancer.
XX
PS   Claim 1; SEQ ID NO 100; 32pp; English.
XX
CC   The invention relates to a nucleic acid, which comprises a segment of the
CC   chemically pretreated DNA of genes associated with DNA transcription from
CC   one of 346 sequences, and an oligomer, in particular an oligonucleotide
CC   or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical
CC   to the chemically pretreated DNA of genes associated with DNA
CC   transcription. The set of oligomer probes are useful for detecting the
CC   cytosine methylation state and/or single nucleotide polymorphisms (SNPs)
CC   in a chemically pretreated genomic DNA. The nucleic acids are useful for
CC   diagnosing or treating diseases associated with DNA transcription
CC   (particularly with the methylation status), e.g. adenosine deaminase
CC   deficiency, viral infection, retroviral infection, Sezary syndrome,
CC   haematological disorders, immunological disorders, Werner syndrome,
CC   tuberculosis, developmental disorders, psoriasis, Rieger's syndrome,

XX
PT   Fragments of chemically modified genes associated with tumor suppressor
PT   genes and oncogenes, useful in designing primers and probes for analyzing
PT   diseases associated with cytosine methylation state e.g. cancer.
XX
PS   Claim 1; SEQ ID NO 151; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and oncogenes
CC   having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC   500 are missing from the sequence listing) sequences (Ss) and sequences
CC   complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC   oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC   probes for detecting the cytosine methylation state and/or single
CC   nucleotide polymorphisms and also to be used in an array for analysing
CC   diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC   probes can also be used in a method for ascertaining genetic and/or
CC   epigenetic parameters for the diagnosis and/or therapy of existing
CC   diseases or the predisposition to specific diseases, by analysing
CC   cytosine methylations. The parameters may be compared to another set of
CC   genetic and/or epigenetic parameters, the differences serving as basis
CC   for diagnosis and/or prognosis events which are disadvantageous to
CC   patients. The present sequence is one of the 533 genomic sequences
CC   derived from tumour suppressor genes and oncogenes. Note: The sequence
CC   data for this patent did not form part of the printed specification, but
CC   was obtained in electronic format directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences

PS Claim 1; SEQ ID NO 113; 24pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence at least 18
CC bases in length of a segment of the chemically pretreated DNA of genes
CC associated with pharmacogenomics according to one of the sequences of the
CC genes ALDH6 (NM_000693), CYP11A (NM_000781), CYP11B1 (NM_000497), CYP3A3
CC (NM_000776 and NM_017460), DPYD (NM_000110), EPHX2 (NM_001979), OCLN
CC (NM_002538), TXNRD1 (NM_003330), UGT8 (NM_003360), MRP (NM_004996,
CC NM_019900, NM_019901, NM_019902, NM_019862, NM_019898, NM_019899) and
CC their complementary sequences, or a sequence (S1) chosen from 87
CC sequences and their complements. The chemical pretreatment is bisulphite
CC treatment to convert cytosines (but not methyl-cytosines) into uracils.
CC Also included are an oligomer (II) in particular an oligonucleotide or a
CC peptide nucleic acid (PNA)-oligomer, comprising in each case at least one
CC base sequence having a length of 9 nucleotides which hybridises to or is
CC identical to a chemically pretreated DNA of genes associated with
CC pharmacogenomics and their complements, arranged in an array for
CC analysing diseases associated with the methylation state (CpG) and/or
CC detecting SNPs (single nucleotide polymorphisms) of the 87 sequences. The
CC oligomers may also be used as PCR primers. The set of 87 nucleic acids
CC and their complements is useful for diagnosis and therapy of solid
CC tumours and cancer. The present sequence represents one the 87 DNA
CC sequences or its complement. Note: The sequence data for this patent did
CC not form part of the printed specification, but was obtained in
CC electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT Oligonucleotide for diagnosis and therapy of diseases associated with
PT signal transduction e.g. cancer, comprises chemically modified genomic
PT sequences of genes associated with signal transduction.
XX
PS Claim 1; SEQ ID NO 354; 24pp; English.
XX
CC The present invention relates to chemically modified DNA sequences of

```
CC   signal transduction associated genes. The DNA sequences are chemically
CC   modified using a solution of bisulphite, hydrogen sulphite or disulphite.
CC   Also disclosed are oligonucleotides and/or PNA oligomers for detecting
CC   the cytosine methylation state (CpG islands) of these genes, and a method
CC   for the diagnosis and/or therapy of genetic and epigenetic parameters of
CC   genes associated with signal transduction. The genomic DNA can be
CC   obtained from cells or cellular components which contain DNA, e.g. cell
CC   lines, biopsies, blood, sputum, stool, urine, cerebral-spinal fluid,
CC   tissue embedded in paraffin such as tissue from eyes, intestine, kidney,
CC   brain, heart, prostate, lung, breast or liver, histologic object slides,
CC   and all their possible combinations. The sequences of the invention are
CC   useful for the diagnosis and therapy of diseases associated with signal
CC   transduction e.g. solid tumours and cancer. ABK31158-ABK31545 represent
CC   chemically pretreated genomic DNA sequences of different genes associated
CC   with signal transduction, or their complementary sequences. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from the
CC   European Patent Office

PT   Reagents for diagnosis, study and therapy of chronic inflammatory joint
PT   and other diseases, comprises any of many specified genes or derived
PT   proteins.
XX
PS   Claim 1; Page; 12pp; German.
XX
CC   This invention describes a novel reagent for diagnosis, molecular
CC   definition and therapy of chronic inflammatory joint diseases, and other
CC   inflammatory disorders, infective or tumour diseases in humans. The
CC   products of the invention have antiinflammatory, cytostatic,
CC   antiarthritic, antirheumatic and immunosuppressive activity and can be
CC   used for gene therapy. The reagent of the invention and any proteins and
CC   antibodies derived from it, are used (i) for analysing tissue and blood
CC   samples for medical diagnosis; (ii) for diagnosis and characterisation of
CC   chronic joint diseases, on the basis of molecular characterisation, and
CC   determining the etiological pathogenicity principle of as yet
CC   uncharacterised inflammatory diseases, also monitoring progression and/or
CC   treatment of disease, and optimisation of therapy and (iii) for
CC   developing treatments for inflammatory diseases, particularly of joints,
CC   infections and tumours. ACA64801-ACA64965 represent human polynucleotides
CC   used in the method of the invention

PT New nucleic acid fragments from chemically treated angiogenesis-
PT associated genes, useful for determining methylation status, e.g. in
PT diagnosis or treatment of cancer.
XX
PS Claim 1; SEQ ID NO 44; 41pp + Sequence Listing; German.
XX
CC The invention relates to a nucleic acid (I) comprising a segment of 18
CC bases of chemically pretreated DNA of angiogenesis-associated genes (II)
CC having sequences (ABQ66971-ABQ67178) or their complements. (I), also
CC related oligomers, are used to evaluate the methylation status and/or
CC single-nucleotide polymorphisms, in angiogenesis-related genes, for
CC diagnosis and treatment of eye diseases, proliferative retinopathy,
CC neovascular glaucoma, solid tumours, inflammation, rheumatoid arthritis,
CC diabetic retinopathy, macular degeneration caused by neovascularisation,
CC psoriasis, arteriosclerosis, inflammatory bowel diseases, ulcers and
CC Crohn's disease. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PS   Claim 1; SEQ ID NO 210; 32pp; English.
XX
CC   The invention relates to a nucleic acid, which comprises a segment of the
CC   chemically pretreated DNA of genes associated with DNA transcription from
CC   one of 346 sequences, and an oligomer, in particular an oligonucleotide
CC   or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical
CC   to the chemically pretreated DNA of genes associated with DNA
CC   transcription. The set of oligomer probes are useful for detecting the
CC   cytosine methylation state and/or single nucleotide polymorphisms (SNPs)
CC   in a chemically pretreated genomic DNA. The nucleic acids are useful for
CC   diagnosing or treating diseases associated with DNA transcription
CC   (particularly with the methylation status), e.g. adenosine deaminase
CC   deficiency, viral infection, retroviral infection, Sezary syndrome,
CC   haematological disorders, immunological disorders, Werner syndrome,
CC   tuberculosis, developmental disorders, psoriasis, Rieger's syndrome,
CC   neurological disorders, neurodegenerative disorders, Waardenburg
CC   syndrome, Niemann-Pick disease, myelodysplastic syndrome, myocardial
CC   infarction, hypertension, angiogenesis, erythropoiesis, congenital heart
CC   disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours
CC   or cancer. Sequences ABK28127-ABK28472 represent DNA transcription
CC   associated genomic DNA molecules of the invention. Note: The sequence
CC   data for this patent did not form part of the printed specification but
CC   was obtained in electronic format directly from the European Patent
CC   Office

XX
CC The invention relates to a nucleic acid (I) comprising a segment of 18
CC bases of chemically pretreated DNA of angiogenesis-associated genes (II)
CC having sequences (ABQ66971-ABQ67178) or their complements. (I), also
CC related oligomers, are used to evaluate the methylation status and/or
CC single-nucleotide polymorphisms, in angiogenesis-related genes, for
CC diagnosis and treatment of eye diseases, proliferative retinopathy,
CC neovascular glaucoma, solid tumours, inflammation, rheumatoid arthritis,
CC diabetic retinopathy, macular degeneration caused by neovascularisation,
CC psoriasis, arteriosclerosis, inflammatory bowel diseases, ulcers and
CC Crohn's disease. Note: The sequence data for this patent did not form
CC part of the printed specification, but was obtained in electronic format
CC directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT Flea Malpighian tubule and head and nerve cord tissue derived nucleic
PT acids useful for the prevention, diagnosis and treatment of flea
PT infestations.
XX
PS Claim 26; Page 666-667; 964pp; English.
XX
CC The invention relates to novel cat flea (Ctenocephalides felis) nucleic
CC acids which are expressed in hindgut and Malpighian tubule (HMT) tissue
CC or head and nerve cord (HNC) tissue. The invention also relates to the
CC encoded proteins. The invention additionally encompasses expression
CC constructs, recombinant viruses and recombinant cells comprising the
CC nucleic acids of the invention, recombinant production of the proteins,
CC antibodies against the proteins, a method of identifying inhibitors of
CC the proteins, and compositions comprising the inhibitors for
CC administration to an animal. The nucleic acids, and the proteins they
CC encode may be used in the prevention, treatment and diagnosis of diseases
CC associated with flea infestations. For example, the nucleic acids may be
CC used to produce an HMT or HNC protein according to standard recombinant
CC DNA methodology by inserting the nucleic acids into a host cell and
CC culturing the cell to express the protein. The HMT and HNC nucleic acids
CC may also be used as DNA probes in diagnostic assays (e.g., PCR) to detect
CC and quantitate the presence of cat flea or other homologous nucleic acid
CC sequences in samples. They may also be used to study the expression and
CC function of the proteins and their role in metabolism. The HMT and HNC
CC proteins may be used as antigens in the production of specific
CC antibodies, and in assays to identify modulators (agonists and
CC antagonists) of HMT and/or HNC protein expression and activity. The anti-
CC HMT/HNC protein antibodies and antagonists may also be used to
CC downregulate protein expression and activity. The antibodies may also be
CC used as diagnostic agents for detecting the presence of flea polypeptides
CC in samples (e.g., by enzyme linked immunosorbent assay (ELISA)). The
CC present sequence represents a cat flea HMT cDNA of the invention

PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
PS Claim 1; SEQ ID NO 236; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Sequences with even
CC numbered Seq ID numbers are the complementary sequence of the
CC corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC 535, except for those whose partner sequence is missing). Note: The
CC sequence data for this patent did not form part of the printed
CC specification, but was obtained in electronic format directly from WIPO
CC at ftp.wipo.int/pub/published_pct_sequences

PT Novel isolated nucleic acid molecules (markers) overexpressed in ovarian
PT cancer cells as compared to their normal non-cancerous ovarian cells are
PT used to characterize stage, grade, histological type of ovarian cancer.
XX
PS Disclosure; SEQ ID NO 18587; 106pp; English.
XX
CC The invention relates to nucleic acid markers which are overexpressed in
CC ovarian cancer cells as compared to their expression in normal (i.e. non-
CC cancerous) ovarian cells. The invention also relates to polypeptides
CC encoded by the markers, antibodies that selectively bind to the
CC polypeptides, a method of inhibiting ovarian cancer in a patient at risk
CC of developing ovarian cancer involving inhibiting expression of a gene
CC corresponding to a marker of the invention and a method of treating a
CC patient afflicted with ovarian cancer comprising providing to cells of
CC the patient an antisense oligonucleotide complementary to a marker of the
CC invention. The markers are useful for assessing if a patient is afflicted
CC with ovarian cancer, which involves comparing the level of expression of
CC a marker in a patient sample and a normal level of expression of the
CC marker in a control non-ovarian cancer sample. A difference between the
CC expression levels indicates ovarian cancer. The level of expression of a
CC marker corresponds to a secreted protein or to a transcribed
CC polynucleotide or its portion. The level of expression of the marker is
CC assessed by detecting the presence in the sample, a protein or protein
CC fragment corresponding to the marker. The presence of protein or protein
CC fragment is detected using an antibody that specifically binds with the
CC protein or protein fragment. Alternatively, the level of expression of
CC the marker is assessed by detecting the presence of a transcribed
CC polynucleotide which anneals with the marker or anneals with a portion of
CC the polynucleotide comprising the marker, under stringent conditions. The
CC marker is also used for monitoring the progression of ovarian cancer in a
CC patient which involves detecting expression of the marker in a patient
CC sample at a first point in time, repeating the method at a subsequent
CC time and comparing the level of expression. The method is carried out
CC using an ovarian tissue sample. A composition comprising a marker,
CC polypeptide or antibody of the invention is used to treat ovarian cancer.
CC This sequence represents a human ovarian cancer DNA marker of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences.

PS Claim 1; SEQ ID NO 666; 32pp + Sequence Listing; German.
XX
CC The present invention provides a number of human immune system associated
CC genes which are modified by the methylation of cytosines. The sequences
CC can be used in the diagnosis and treatment of immune system disorders,
CC including eye diseases such as retinopathy, neovascular glaucoma and
CC macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC diseases. The present sequence is a gene of the invention

PS Claim 1; SEQ ID NO 21; 25pp + Sequence Listing; English.
XX
CC The invention relates to nucleic acids containing a sequence of at least
CC 18 nucleotides of chemically treated DNA of genes associated with DNA
CC repair, and their complements. The invention also relates to nucleic
CC acids comprising at least 18 base pairs of the chemically pretreated DNA
CC of genes associated with DNA repair selected from PMS2L1, PMS2L12,
CC PMS2L2, PMS2L3, PMS2, L4, PMS2L5, PMS2L6, MGMT, MSH2, NUDT1, TDG, INPPL1,
CC RFC4, DDIT1L, FANCB, or XRCC8. Nucleic acids of the invention and related
CC oligomers, are useful for diagnosis of diseases associated with gene
CC repair, specifically ataxia telangiectasia, aging, Bloom's syndrome,
CC Cockayne syndrome, Nijmegen breakage syndrome or Werner syndrome,
CC immunodeficiency, trichthiodystrophy, Fanconi's anaemia, solid tumours
CC and cancer, particularly by determining status of cytosine methylation
CC and/or by detecting single-nucleotide polymorphisms. Determination of
CC individual methylation patterns may allow development of individualised
CC therapies. The sequences given in records ABL92192-ABL92335 represent
CC chemically pre-treated DNA fragments from genes associated with DNA
CC repair, and their complements. Note: The sequence data for this patent is
CC not represented in the specification, but is based on sequence
CC information supplied by the European Patent Office

XX
PS Claim 1; Page 31-36; 97pp; English.
XX
CC The invention relates to chemically modified DNA of genes associated with
CC DNA adducts, oligonucleotides and/or peptide nucleic acid (PNA) oligomers
CC for detecting cytosine methylations as well as method for ascertaining
CC genetic and/or epigenetic parameters of genes associated with DNA
CC adducts. Oligomers of the invention coupled to a solid phase is useful
CC for manufacturing an arrangement of different oligomers (array) fixed to
CC a carrier material for analysing diseases associated with the methylation
CC state of the CpG dinucleotides of chemically pretreated DNA of genes
CC associated with DNA adduct. They are also useful for ascertaining genetic
CC and/or epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases by analysing cytosine
CC methylations. Sequences of the invention are useful for diagnosis and
CC therapy of solid tumours and cancers. They are also useful in gene
CC therapy. The present sequence is chemically pretreated human genomic DNA
CC associated DNA adducts

PT Novel isolated polypeptide associated with breast cancer, useful for
PT detecting presence of polypeptide in sample, as a marker for breast
PT cancer.
XX
PS Disclosure; SEQ ID NO 735; 36pp; English.
XX
CC The invention relates to an isolated polypeptide (I) associated with
CC breast cancer which is encoded by a nucleic acid molecule comprising a
CC nucleotide sequence (S1). Further disclosed is an antibody that binds to
CC the polypeptide of the invention. The activity of the polypeptide of the
CC invention may be described as cytostatic. The antibody is useful for
CC detecting the presence of (I) in a sample. Nucleic acid molecules of the
CC invention are useful in the detection of breast tumours. (I) is useful as
CC a marker for breast cancer and in breast cancer therapy. Sequences given
CC in records ACN78851-ACN92934 represent nucleic acid markers associated
CC with breast cancer. Note: The sequence listing does not form part of the
CC specification but may be obtained in electronic format from the USPTO web
CC site at seqdata.uspto.gov/sequence.html?DocID=20030099974

PT   Fragments of chemically modified genes associated with tumor suppressor
PT   genes and oncogenes, useful in designing primers and probes for analyzing
PT   diseases associated with cytosine methylation state e.g. cancer.
XX
PS   Claim 1; SEQ ID NO 514; 27pp; English.
XX
CC   The invention relates to a nucleic acid comprising a sequence of 18
CC   bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC   bisulphite, of genes associated with tumour suppression and oncogenes
CC   having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC   500 are missing from the sequence listing) sequences (Ss) and sequences
CC   complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC   oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC   probes for detecting the cytosine methylation state and/or single
CC   nucleotide polymorphisms and also to be used in an array for analysing
CC   diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC   probes can also be used in a method for ascertaining genetic and/or
CC   epigenetic parameters for the diagnosis and/or therapy of existing
CC   diseases or the predisposition to specific diseases, by analysing
```

```
CC   cytosine methylations. The parameters may be compared to another set of
CC   genetic and/or epigenetic parameters, the differences serving as basis
CC   for diagnosis and/or prognosis events which are disadvantageous to
CC   patients. The present sequence is one of the 533 genomic sequences
CC   derived from tumour suppressor genes and oncogenes. Sequences with even
CC   numbered Seq ID numbers are the complementary sequence of the
CC   corresponding odd numbered sequence (e.g. ID 2 and ID1, ID 536 and ID
CC   535, except for those whose partner sequence is missing). Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

CC   The present invention provides a number of human immune system associated
CC   genes which are modified by the methylation of cytosines. The sequences
CC   can be used in the diagnosis and treatment of immune system disorders,
CC   including eye diseases such as retinopathy, neovascular glaucoma and
CC   macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid
CC   leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis,
CC   rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel
CC   diseases. The present sequence is a gene of the invention

PT   New nucleic acid associated with lactation, and muscle and fat
PT   deposition, useful for genome mapping, gene identification and analysis,
PT   cattle breeding, or for genetically improving cattle.
XX
PS   Claim 2; SEQ ID NO 11234; 245pp; English.
XX
CC   The invention relates to a purified nucleic acid molecule associated with
CC   lactation or muscle and fat deposition (designated LMFD), derived from
CC   cattle, and the LMFD nucleic acid can specifically hybridise to a second
CC   nucleic acid molecule comprising any of 15112 nucleotide sequences,
CC   appearing as ABX34836-ABX49947, or complements of them. Also included are
CC   ; (1) a transformed cell having a nucleic acid comprising an LMFD nucleic
CC   acid linked to a promoter and a 3' non- translated sequence that
CC   functions in the cell to cause termination of transcription and addition
CC   of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and
CC   (2) determining a level or pattern of a molecule in a bovine cell or
CC   tissue comprising: (a) incubating a marker nucleic acid (comprising any
CC   of the 15112 nucleic acid sequences or its complement or fragment) with a
CC   complementary nucleic acid molecule obtained from the bovine cell or
CC   tissue, where hybridisation between the marker nucleic acid and the
CC   complementary nucleic acid permits the detection of the molecule; and (b)
CC   detecting the level or pattern of the complementary nucleic acid, where
CC   the detection of the complementary nucleic acid is predictive of the
CC   level or pattern of the molecule. The LMFD nucleic acid is used for
CC   determining a level or pattern of a molecule in a bovine cell or tissue.
CC   It is useful for genome mapping, gene identification and analysis, cattle
CC   breeding, preparation of constructs for use in cattle gene expression, or
CC   for genetically improving cattle. The present sequence is one of the
CC   15112 bovine LMFD EST (expressed sequence tag) nucleic acids. Note: The
CC   present sequence was not shown in the specification but was obtained in
CC   electronic format from the USPTO web site:

PT   Diagnosing a colon cell proliferative disorder in a subject comprises
PT   obtaining one or more samples from colon tissue or serum the subject, and
PT   detecting a decrease in the amount or expression of a polypeptide
PT   expressed from the EYA4 gene.
XX
PS   Claim 22; Page 91-99; 101pp; English.
XX
CC   The present invention describes a method for diagnosing a colon cell
CC   proliferative disorder in a subject. The method comprises obtaining one
CC   or more samples from colon tissue or serum or both of the subjects, and
CC   detecting a decrease in the amount or expression of a polypeptide
CC   expressed from the EYA4 gene. Also described: (1) repressing
CC   transformation in a colon cell by contacting the cell with an EYA4
CC   polypeptide to inhibit a transformed phenotype; (2) preventing or
CC   treating a colon cell proliferative disorder in a subject by
CC   administering to the subject a compound that agonises EYA4; (3) a nucleic
CC   acid comprising a sequence of at least 18 bases in length of a segment of
CC   the chemically pretreated genomic DNA or its complement; (4) an oligomer,
CC   in particular an oligonucleotide or peptide nucleic acid (PNA)-oligomer
CC   comprising in each case of at least one base sequence having a length of
CC   at least 9 nucleotides which is complementary to, or hybridises under
CC   moderately stringent or stringent conditions to a pretreated genomic DNA;
CC   (5) a set of oligomers comprising at least two of the oligomer described
CC   above; (6) manufacturing an arrangement of different oligomers (array)
CC   fixed to a carrier material; (7) an arrangement of different oligomers
CC   (array) obtainable in (6); (8) an array of different oligonucleotide-
CC   and/or PNA-oligomer sequences, which are arranged on a plane solid phase
CC   in the form of a rectangular or hexagonal lattice; (9) a composition of
CC   matter comprising the nucleic acid and a buffer comprising 1-5 mM
CC   magnesium chloride, 100-500 micromole dNTP, 0.5-5 units of taq
CC   polymerase, and the oligomer; (10) detecting, differentiating or
CC   distinguishing between colon cell proliferative disorders; (11) detecting
CC   a colon cell proliferative disorder; and (12) a kit useful for the method
CC   in (10) comprising a bisulfite reagent, and at least one of the nucleic
CC   acid molecule or peptide described above, or their complements. EYA4 has
CC   cytostatic activity, and can be used in gene therapy. The methods, vector
CC   and polypeptide from the present invention are useful for treating colon
CC   cell proliferative disorders. The EYA4 gene, the polypeptide expressed
CC   from the EYA4 gene and kit are useful for detecting, differentiating or
CC   distinguishing between colon cell proliferative disorders. The oligomers
CC   are useful for detecting the cytosine methylation state and/or single
CC   nucleotide polymorphisms (SNPs) within nucleic acid sequences. The array
CC   is useful for analysing diseases associated with the methylation state of
CC   the CpG dinucleotides. The present sequence represents a chemically
CC   pretreated human EYA4 gene, which is given in the exemplification of the
CC   present invention. Human EYA4 is mapped to chromosome 6, more
CC   specifically to 6q22.3.

PT Fragments of chemically modified genes associated with tumor suppressor
PT genes and oncogenes, useful in designing primers and probes for analyzing
PT diseases associated with cytosine methylation state e.g. cancer.
XX
PS Claim 1; SEQ ID NO 9; 27pp; English.
XX
CC The invention relates to a nucleic acid comprising a sequence of 18
CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with
CC bisulphite, of genes associated with tumour suppression and oncogenes
CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and
CC 500 are missing from the sequence listing) sequences (Ss) and sequences
CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid-
CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of
CC probes for detecting the cytosine methylation state and/or single
CC nucleotide polymorphisms and also to be used in an array for analysing
CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The
CC probes can also be used in a method for ascertaining genetic and/or
CC epigenetic parameters for the diagnosis and/or therapy of existing
CC diseases or the predisposition to specific diseases, by analysing
CC cytosine methylations. The parameters may be compared to another set of
CC genetic and/or epigenetic parameters, the differences serving as basis
CC for diagnosis and/or prognosis events which are disadvantageous to
CC patients. The present sequence is one of the 533 genomic sequences
CC derived from tumour suppressor genes and oncogenes. Note: The sequence
CC data for this patent did not form part of the printed specification, but
CC was obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT cancer.
XX
PS Claim 1; SEQ ID NO 322; 32pp; English.
XX
CC The invention relates to a nucleic acid, which comprises a segment of the
CC chemically pretreated DNA of genes associated with DNA transcription from
CC one of 346 sequences, and an oligomer, in particular an oligonucleotide
CC or peptide nucleic acid (PNA)-oligomer that hybridises to or is identical
CC to the chemically pretreated DNA of genes associated with DNA
CC transcription. The set of oligomer probes are useful for detecting the
CC cytosine methylation state and/or single nucleotide polymorphisms (SNPs)
CC in a chemically pretreated genomic DNA. The nucleic acids are useful for
CC diagnosing or treating diseases associated with DNA transcription
CC (particularly with the methylation status), e.g. adenosine deaminase
CC deficiency, viral infection, retroviral infection, Sezary syndrome,
CC haematological disorders, immunological disorders, Werner syndrome,
CC tuberculosis, developmental disorders, psoriasis, Rieger's syndrome,
CC neurological disorders, neurodegenerative disorders, Waardenburg
CC syndrome, Niemann-Pick disease, myelodysplastic syndrome, myocardial
CC infarction, hypertension, angiogenesis, erythropoiesis, congenital heart
CC disease, HDR syndrome, arthritis, polyglutamine disorders, solid tumours
CC or cancer. Sequences ABK28127-ABK28472 represent DNA transcription
CC associated genomic DNA molecules of the invention. Note: The sequence
CC data for this patent did not form part of the printed specification but
CC was obtained in electronic format directly from the European Patent
CC Office

PT New purified nucleic acid for producing a soybean plant having soybean
PT cyst nematode resistance and for use in plant breeding programs.
XX
PS Claim 2; Page 204-400; 1353pp; English.
XX
CC The invention relates to nucleic acid molecules from regions of the
CC soybean genome which are associated with soybean cyst nematode (SCN)
CC resistance. The nucleic acids are used to transform plants, and can
CC produce soybean plants having an rhg1 or an Rhg4 SCN resistant allele.
CC The nucleic acids can be used for investigating rhg1 or Rhg4 haplotypes
CC of soybean plants and for introgressing SCN resistance or partial SCN
CC resistance into soybean plants. They can also be used in plant breeding
CC programmes. The invention also relates to proteins encoded by such
CC nucleic acid molecules, as well as antibodies capable of recognising
CC these proteins. The present sequence is a nucleic acid molecule provided
CC in the specification

PT Identifying at least one gene involved in plant resistance or response to
PT pathogenic infection for conferring resistance or tolerance to a plant to
PT bacterial, fungal or viral infection by determining or detecting plant
PT gene expression.
XX
PS Claim 27; SEQ ID NO 5263; 899pp; English.
XX
CC The present invention relates to a method (M1) for identifying genes
CC involved in plant resistance or response to pathogenic infection. M1
CC comprises identifying a gene whose expression is significantly altered in
CC the incompatible interaction of plant gene expression relative to
CC expression of the gene in an uninfected plant, in a mutant plant that
CC does not express a gene associated with response to pathogenic infection,
CC or in a corresponding incompatible or compatible interaction. (M1) is
CC useful for conferring resistance to resistance or tolerance to a plant to
CC bacterial, fungal or viral infection. The present sequence was used to
CC illustrate the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

REFERENCE   1  (bases 1 to 165329)
  AUTHORS   Tracey,A.
  TITLE     Direct Submission
  JOURNAL   Submitted (15-NOV-2001) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Nov 16, 2001 this sequence version replaced gi:15020514.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
            RP11-430G6 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-430G6 It may be shorter because we sequence overlapping
            sections only once, except for a short overlap.
            The true right end of clone RP11-430G6 is at 165329 in this
            sequence. The true right end of clone RP11-331H2 is at 2000 in this
            sequence.

  TITLE     Direct Submission
  JOURNAL   Submitted (16-MAY-2001) Sanger Centre, Hinxton, Cambridgeshire,
            CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
            requests: clonerequest@sanger.ac.uk
COMMENT     On May 17, 2001 this sequence version replaced gi:13872373.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP11-334H12 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            IMPORTANT: This sequence is not the entire insert of clone
            RP11-334H12 It may be shorter because we sequence overlapping
            sections only once, except for a 100 base overlap.
            The true left end of clone RP11-334H12 is at 1 in this sequence.
            The true left end of clone RP1-57E3 is at 131360 in this sequence.
            The true right end of clone RP11-193P4 is at 87630 in this
            sequence.

PFMAL3P3
LOCUS       PFMAL3P3               116696 bp    DNA     linear   INV 29-JAN-2003
DEFINITION  Plasmodium falciparum MAL3P3, complete sequence.
ACCESSION   Z98547 AL008977 AL010164 AL139179 AL844502 Z98548 Z98549 Z98550
VERSION     Z98547.2  GI:15383894
KEYWORDS    HTG; 60S Acidic ribosomal protein P2; asparagine synthetase;
            calcium-dependent protein kinase; DNA polymerase delta; dual
            specificity protein phosphatase; guanine nucleotide-binding
            protein; PDZ domain; rat BRAIN-like protein; serine/threonine
            protein kinases; T-complex protein eta; T08A11.2-like protein; WD
            domain; Y48E1C.2-like protein.
SOURCE      Plasmodium falciparum 3D7
  ORGANISM  Plasmodium falciparum 3D7
            Eukaryota; Alveolata; Apicomplexa; Haemosporida; Plasmodium.

  TITLE     Direct Submission
  JOURNAL   Submitted (14-AUG-1997) P.falciparum Genome Sequencing Consortium,
            The Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge
            CB10 1SA, UK
COMMENT     On or before Aug 31, 2001 this sequence version replaced
            gi:2894463, gi:2894495, gi:2894369, gi:2982521, gi:2665376,
            gi:3649752.
            For more information about this sequence or the Malaria Project,
            see http://www.sanger.ac.uk/Projects/P_falciparum. The following
            numbers may have changed slightly:
            The true left end of clone MY434-3D7 is at 1 in this sequence. The
            true right end of clone MY549-3D7 is at 79511 in this sequence. The
            true right end of clone MY434-3D7 is at 114736 in this sequence.

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep Clone-derived
            Zebrafish pUC subclones occasionally display inconsistency over the
            length of mononucleotide A/T runs and conserved TA repeats. Where
            this is found the longest good quality representation will be
            submitted.
            Repeat names beginning 'Dr' were identified by the Recon repeat
            discovery system (Zhirong Bao and Sean Eddy, submitted), and those
            beginning 'drr' were identified by Rick Waterman (Stephen Johnson
            lab, WashU).  For further information see
            http://www.sanger.ac.uk/Projects/D_rerio/fishmask.shtml
            CH211-184M19 is from a CHORI-211 BAC library
            VECTOR: pTARBAC2.1.

                Center clone name: 391_I_2
            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 181094 bases at least Q40
                Consensus quality: 189581 bases at least Q30
                Consensus quality: 192532 bases at least Q20
                Insert size: 208000; agarose-fp
                Insert size: 194088; sum-of-contigs
                Quality coverage: 3.7 in Q20 bases; agarose-fp
                Quality coverage: 4.0 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 28 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1281: contig of 1281 bp in length
            *     1282     1381: gap of 100 bp
            *     1382     2899: contig of 1518 bp in length
            *     2900     2999: gap of 100 bp
            *     3000     5681: contig of 2682 bp in length
            *     5682     5781: gap of 100 bp
            *     5782     8351: contig of 2570 bp in length
            *     8352     8451: gap of 100 bp
            *     8452    10639: contig of 2188 bp in length
            *    10640    10739: gap of 100 bp
            *    10740    13655: contig of 2916 bp in length
            *    13656    13755: gap of 100 bp
            *    13756    15927: contig of 2172 bp in length

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 12 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

            Quality coverage: 9.53x in Q20 bases; sum-of-contigs Quality
            coverage: 6.73x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 6 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    27224: contig of 27224 bp in length
            *    27225    27324: gap of 100 bp
            *    27325    44196: contig of 16872 bp in length
            *    44197    44296: gap of 100 bp
            *    44297    95722: contig of 51426 bp in length
            *    95723    95822: gap of 100 bp
            *    95823    98782: contig of 2960 bp in length
            *    98783    98882: gap of 100 bp
            *    98883   108140: contig of 9258 bp in length
            *   108141   108240: gap of 100 bp
            *   108241   121958: contig of 13718 bp in length.

            -------------- Summary Statistics
```

```
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 201054 bases at least Q40
            Consensus quality: 201870 bases at least Q30
            Consensus quality: 202463 bases at least Q20
            Insert size: 204738; sum-of-contigs
            Insert size: 207929; 5.7% error; agarose-fp
            Quality coverage: 7.77x in Q20 bases; sum-of-contigs Quality
            coverage: 7.88x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 14 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3987: contig of 3987 bp in length
            *     3988     4087: gap of 100 bp

  TITLE     Direct Submission
  JOURNAL   Submitted (21-MAY-2002) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On May 25, 2002 this sequence version replaced gi:18476790.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 10, constructed by the Sanger Centre Chromosome 10
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr10
            RP11-309P22 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm

            coverage: 7.77x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 8 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    53231: contig of 53231 bp in length

            requests: clonerequest@sanger.ac.uk
COMMENT     On Sep 27, 2001 this sequence version replaced gi:15723066.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 13, constructed by the Sanger Centre Chromosome 13
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr13
            RP11-57O2 is from the library RPCI-11.1 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            This sequence is the entire insert of clone RP11-57O2 The true left
            end of clone RP11-72P19 is at 122681 in this sequence. The true
            right end of clone RP11-124N19 is at 6499 in this sequence.

            jes@sanger.ac.uk or rw@nematode.wustl.edu E-mail: worm@sanger.ac.uk
COMMENT     Coding sequences below are predicted from computer analysis, using
            predictions from Genefinder (P. Green, U. Washington), and other
            available information.
            Current sequence finishing criteria for the C. elegans genome
            sequencing consortium are that all bases are either sequenced
            unambiguously on both strands, or on a single strand with both a
            dye primer and dye terminator reaction, from distinct subclones.
            Exceptions are indicated by an explicit note.
            IMPORTANT:  This sequence is NOT necessarily the entire insert of
            the specified clone.  It may be shorter because we only sequence
            overlapping sections once, or longer because we arrange for a small
            overlap between neighbouring submissions.
            For a graphical representation of this sequence and its analysis
            see:- http://wormbase.sanger.ac.uk/perl/ace/elegans/seq/sequence?
            name=Y53C12D
            For a graphical representation of this sequence and its analysis
            see:- http:
            IMPORTANT: This sequence is not the entire insert of clone Y53C12D.
            It may be shorter because we only sequence overlapping sections
            once, or longer because we arrange for a small overlap between
            neighbouring submissions.
            The start of this sequence (1. .117) overlaps with the end of
            sequence Z99277.
            The end of this sequence (1390. .1496) overlaps with the start of
            sequence Z99278.

            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
```

```
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 22, constructed by the Sanger Centre Chromosome 22
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr22
            RP1-127L4 is from the library RPCI-1 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2.

            -------------- Project Information
            Center project name: zK265A11
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 203834 bases at least Q40
            Consensus quality: 204157 bases at least Q30
            Consensus quality: 204331 bases at least Q20
            Insert size: 204975; sum-of-contigs
            Insert size: 155101; 5.9% error; agarose-fp
            Quality coverage: 8.84x in Q20 bases; sum-of-contigs Quality
            coverage: 11.71x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 6 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    26435: contig of 26435 bp in length
            *    26436    26535: gap of 100 bp
            *    26536    97866: contig of 71331 bp in length
            *    97867    97966: gap of 100 bp
            *    97967   101958: contig of 3992 bp in length
            *   101959   102058: gap of 100 bp
            *   102059   117477: contig of 15419 bp in length
            *   117478   117577: gap of 100 bp
            *   117578   153352: contig of 35775 bp in length
```

```
          *   153353   153452: gap of 100 bp
          *   153453   205475: contig of 52023 bp in length.

  AUTHORS   Hyman,R.W., Qin,F., Fung,E.L., Conway,A.B. and Davis,R.W.
  TITLE     Direct Submission
  JOURNAL   Submitted (18-JUN-1998) Stanford DNA Sequencing and Technology
            Center, Stanford University, 855 California Avenue, Palo Alto, CA
            94304, USA
COMMENT     On Aug 12, 2000 this sequence version replaced gi:8810455.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 4 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1   187308: contig of 187308 bp in length
            *  187309   187508: gap of unknown length
            *  187509   257820: contig of 70312 bp in length
            *  257821   258020: gap of unknown length
            *  258021   307255: contig of 49235 bp in length
            *  307256   307455: gap of unknown length
            *  307456   310779: contig of 3324 bp in length.

            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1    51208: contig of 51208 bp in length
            *   51209    51308: gap of unknown length
            *   51309   163703: contig of 112395 bp in length.

  TITLE     Direct Submission
  JOURNAL   Submitted (20-SEP-2002) P.falciparum Genome Sequencing Consortium,
            The Welcome Trust Sanger Institute, Wellcome Trust Genome Campus,
            Hinxton, Cambridge CB10 1SA, UK
COMMENT     This chromsome is unfinished and still contains gaps. The contigs
            have been orderd as accuratly as possible using mapping data but
            there will be errors. There may also be some sequencing errors.
            Contigs are seperated with 100 Ns.
            For more information about this sequence or the Malaria Project,
            see http://www.sanger.ac.uk/Projects/P_falciparum.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 12 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1    14518: contig of 14518 bp in length
            *   14519    14618: gap of 100 bp
            *   14619    40653: contig of 26035 bp in length
            *   40654    40753: gap of 100 bp
            *   40754    41735: contig of 982 bp in length
            *   41736    41835: gap of 100 bp
            *   41836    62916: contig of 21081 bp in length
            *   62917    63016: gap of 100 bp

  TITLE     Direct Submission
  JOURNAL   Submitted (08-AUG-2002) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
            humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Aug 13, 2002 this sequence version replaced gi:22003159.
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest. The following
            abbreviations are used to associate primary accession numbers given
            in the feature table with their source databases: Em:, EMBL; Sw:,
            SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP
            database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome X, constructed by the Sanger Centre Chromosome X Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/ChrX
            RP11-261P4 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6.

---------- Summary Statistics
Center project name: H_NH0651C19
Drafting Center: WIBR
----------.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-745K4. Actual start of this clone is at base position 1 of RP11-651C19; actual end is at base position 163597 of RP11-651C19.

Data from AC097108 and AC016295 was used to finish this clone, AC098870. Polymorphisms have been identified between AC097108 and AC098870.

The sequence of AC040969 has been incorporated into AC098870.

            Quality coverage: 8.50x in Q20 bases; sum-of-contigs Quality
            coverage: 8.33x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 11 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2684: contig of 2684 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2003) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On May 13, 2003 this sequence version replaced gi:25007559.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.
            -------------- Genome Center
                Center: Baylor College of Medicine

COMMENT     On Nov 9, 2002 this sequence version replaced gi:23096552.
            The sequence in this assembly is a combination of BAC based reads
            and whole genome shotgun sequencing reads assembled using Atlas
            (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
            in the feature table below represents a scaffold in the Atlas
            assembly (a 'contig-scaffold'). Within each contig-scaffold,
            individual sequence contigs are ordered and oriented, and separated
            by sized gaps filled with Ns to the estimated size. The sequence
            may extend beyond the ends of the clone and there may be sequence
            contigs within a contig-scaffold that consist entirely of whole
            genome shotgun sequence reads. Both end sequences and whole genome
            shotgun sequence only contigs will be indicated in the feature
            table.

  TITLE     Direct Submission
  JOURNAL   Submitted (20-SEP-2002) P.falciparum Genome Sequencing Consortium,
            The Welcome Trust Sanger Institute, Wellcome Trust Genome Campus,
            Hinxton, Cambridge CB10 1SA, UK
COMMENT     This chromsome is unfinished and still contains gaps. The contigs
            have been orderd as accuratly as possible using mapping data but
            there will be errors. There may also be some sequencing errors.
            Contigs are seperated with 100 Ns.
            For more information about this sequence or the Malaria Project,
            see http://www.sanger.ac.uk/Projects/P_falciparum.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 25 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *       1    18663: contig of 18663 bp in length

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 13 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1    47030: contig of 47030 bp in length

COMMENT     On Aug 12, 2000 this sequence version replaced gi:8810457.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 2 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1    41526: contig of 41526 bp in length
            *   41527    41726: gap of unknown length
            *   41727   199551: contig of 157825 bp in length.

JOURNAL Submitted (21-SEP-2004) Department of Genetics, Washington University, Genome Sequencing Center, 4444 Forest Park Avenue, St. Louis, MO 63110, USA
COMMENT Submitted by:
Genome Sequencing Center
Department of Genetics, Washington University
St. Louis , MO 63110, USA, and
Sanger Centre, Hinxton Hall
Cambridge CB10 IRQ, England
email: submissions@watson.wustl.edu and jes@sanger.ac.uk

NOTICE: This sequence may not be the entire insert of this clone. It may be shorter because we only sequence overlapping sections once, or longer because we provide a small overlap between neighboring submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one m13 subclone.

For a graphical representation of this clone sequence and its analysis see:
http://www.wormbase.org/db/seq/sequence?name=H43I07;class=Sequence

NEIGHBORING CLONE INFORMATION

The 5' clone is Y45G5AR, 200 bp overlap; the 3' clone is E03D2, 200

```
          bp overlap. Actual start of this clone is at base position 1 of
          H43I07; actual end is at 8142 of E03D2.

          NOTES:

          Coding seqences below are the result of integration and manual
          review of the following data : computer analysis using the program
          Genefinder (P. Green and L. Hillier, personal communication), the
          large scale EST projects of Yuji Kohara
          (http://www.ddbj.nig.ac.jp/c-elegans/html/CE_INDEX.html) and The C.
          elegans ORFeome cloning project (http://worfdb.dfci.harvard.edu/),
          similarity to other proteins from BlastX analyses
          (http://blast.wustl.edu/), sequence conservation with C. briggsae
          using Jim Kent's WABA alignment program (Genome Research
          10:1115-1125, 2000), individual C. elegans GenBank submissions,
          and personal communications with C. elegans researchers. tRNAs
          are predicted using the program tRNAscan-SE (Lowe, T.M. and
          Eddy, S.R., 1997, Nucl. Acids. Res., 25, 955-964).

COMMENT     On Nov 2, 1998 this sequence version replaced gi:3724203.
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep ----------
            Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: humquery@sanger.ac.uk
            ----------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            This sequence was generated from part of bacterial clone contigs of
            human chromosome 22, constructed by the Sanger Centre Chromosome 22
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr22
            RP1-101G11 is from the library RPCI-1 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2.

  TITLE     Direct Submission
  JOURNAL   Submitted (16-JUN-1999) P.falciparum Genome Sequencing Consortium,
            The Sanger Centre, Wellcome Trust Genome Campus, Hinxton, Cambridge
            CB10 1SA, UK
COMMENT     On Mar 24, 1999 this sequence version replaced gi:4034845.
            For more information about this sequence or the Malaria Project,
            see http://www.sanger.ac.uk/Projects/P_falciparum. IMPORTANT: This
            sequence is unfinished and does not necessarily represent the
            correct sequence. Work on the sequence is in progress and the
            release of this data is based on the understanding that the
            sequence may change as work continues. The sequence may be
            contaminated with foreign sequence from E.coli, yeast, vector,
            phage etc.
            Order of segments is not known; 800 n's separate segments.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 7 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2253: contig of 2253 bp in length
            *     2254     3053: gap of 800 bp

COMMENT     On Mar 28, 2003 this sequence version replaced gi:29293974.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.
            Reports of lowest quality individual bases and measures of base
            quality are listed below. Description of the metrics can be found
            at URL:
            http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht
            ml.

            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 283329 bases at least Q40
            Consensus quality: 286900 bases at least Q30
            Consensus quality: 289553 bases at least Q20
            Insert size: 294398; sum-of-contigs
            Insert size: 214942; 3.3% error; agarose-fp
            Quality coverage: 5.41x in Q20 bases; sum-of-contigs Quality
            coverage: 8.73x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 35 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

RESULT 100
AX345640/c
LOCUS       AX345640               6759 bp    DNA     linear   PAT 01-FEB-2002
DEFINITION  Sequence 711 from Patent WO0200928.
ACCESSION   AX345640
VERSION     AX345640.1  GI:18493526
KEYWORDS    .
SOURCE      synthetic construct
  ORGANISM  synthetic construct
            other sequences; artificial sequences.
REFERENCE   1
  AUTHORS   Olek,A., Piepenbrock,C. and Berlin,K.
  TITLE     Diagnosis of diseases associated with the immune system
  JOURNAL   Patent: WO 0200928-A 711 03-JAN-2002;
